

Rising to the Challenge

How an Outcome-Based World is Transforming Procurement

Tim Cummins, CEO, IACCM

World Bank, Washington, D.C., February 19th, 2014

Why are we having this discussion?

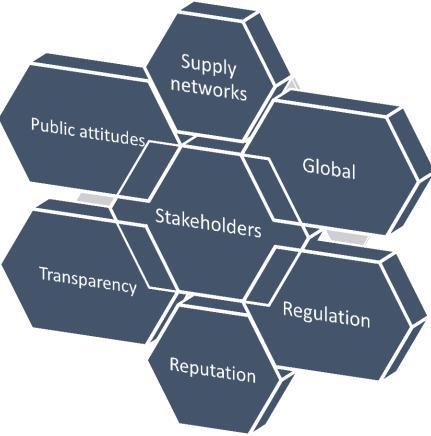

- Procurement is under pressure to deliver more value
- Today, an average of 35% of contracts seriously under-perform
- This has massive economic impact
 - Cost
 - Time
 - Quality

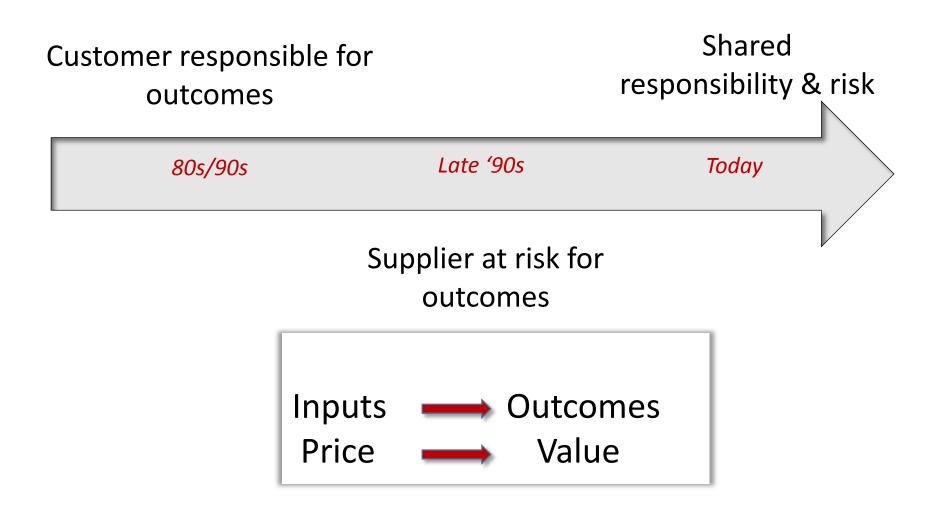

A more complicated environment

Where does Procurement responsibility begin and end?

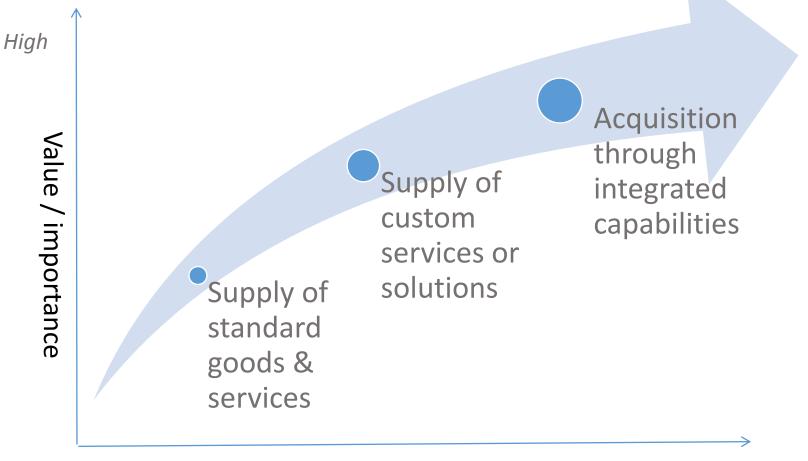

New attitudes and expectations

A spectrum of partnership

International Association for Contract and Commercial Management

Low

Time / Uncertainty

High

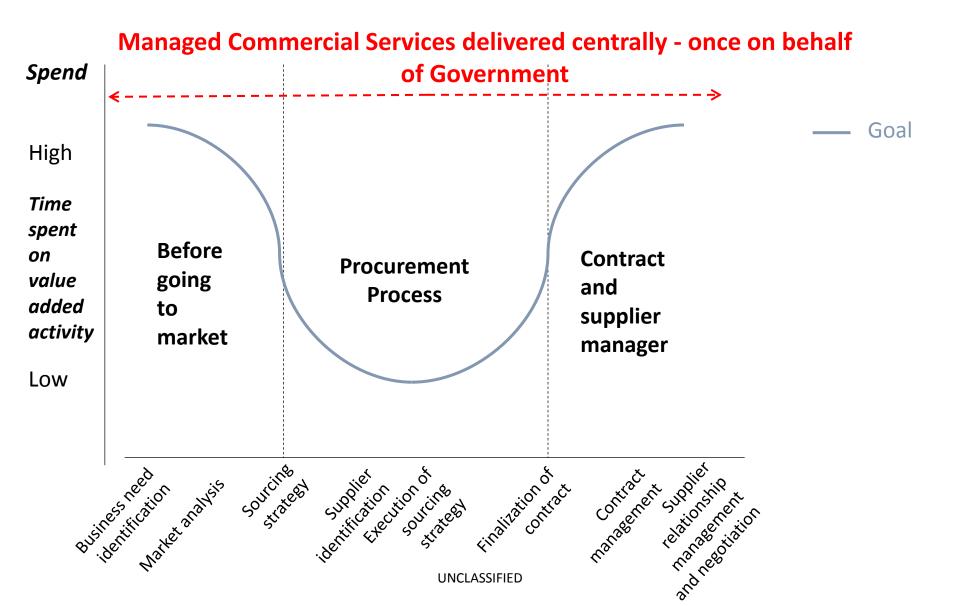

Confused responsibilities

- Establish technical and commercial requirements
- Define type of relationship and agreement
- Select appropriate terms and conditions
- Plan and conduct negotiation
- Oversee transition
- Manage performance
- Ensure governance
- Plan exit or migration to new supplier
- Learn from experience

UK Government perspective:

The new DNA for commercial activities

Where will Procurement play?

International Association for Contract and Commercial Management

- 'Lean' is about quality reducing errors
- Driving improved supply outcomes requires:
 - Insight to what goes wrong
 - Tools, systems and skills to support the emerging business environment
 - Revised process and accountability for success

What goes wrong?

Scope or goal change 21% 77% Responsibilities of the parties 43% 55% Price changes 44% 48% Delivery/acceptance 5% 48% 47% Change management procedures 13% 50% 37% Invoices/late payments 36% 49% Performance/guarantees 33% 58% Service levels and warranties 12% 57% 30% Liquidated damages 32% 52% 16% 0 20 40 60 80 100 Never Ocasionally Frequently

Only 16% feel that the contracting process consistently achieves a positive impact on the supply relationship.

• Failure to establish or communicate clear objectives is a major issue that undermines performance.

Call to

- Late engagement of commercial resources or poorly judged use of industry standards contribute to risk-averse contract terms that distract from establishing key performance criteria and processes.
- **Problems with defining project scope** cause subsequent disputes and disagreements over change management, charges and payment.
- The use of traditional, legally-driven documents renders contracts of little practical use to delivery teams, undermining their primary value as instruments of communication and understanding.
- Few organizations make effective **use of past contracts as a source of learning**. Procurement contracting is especially weak in this regard.
