

# **ACCOUNTABILITY AND POLITICS IN SOCIAL SAFETY NETS**

## SOCIAL SAFETY NETS CORE COURSE

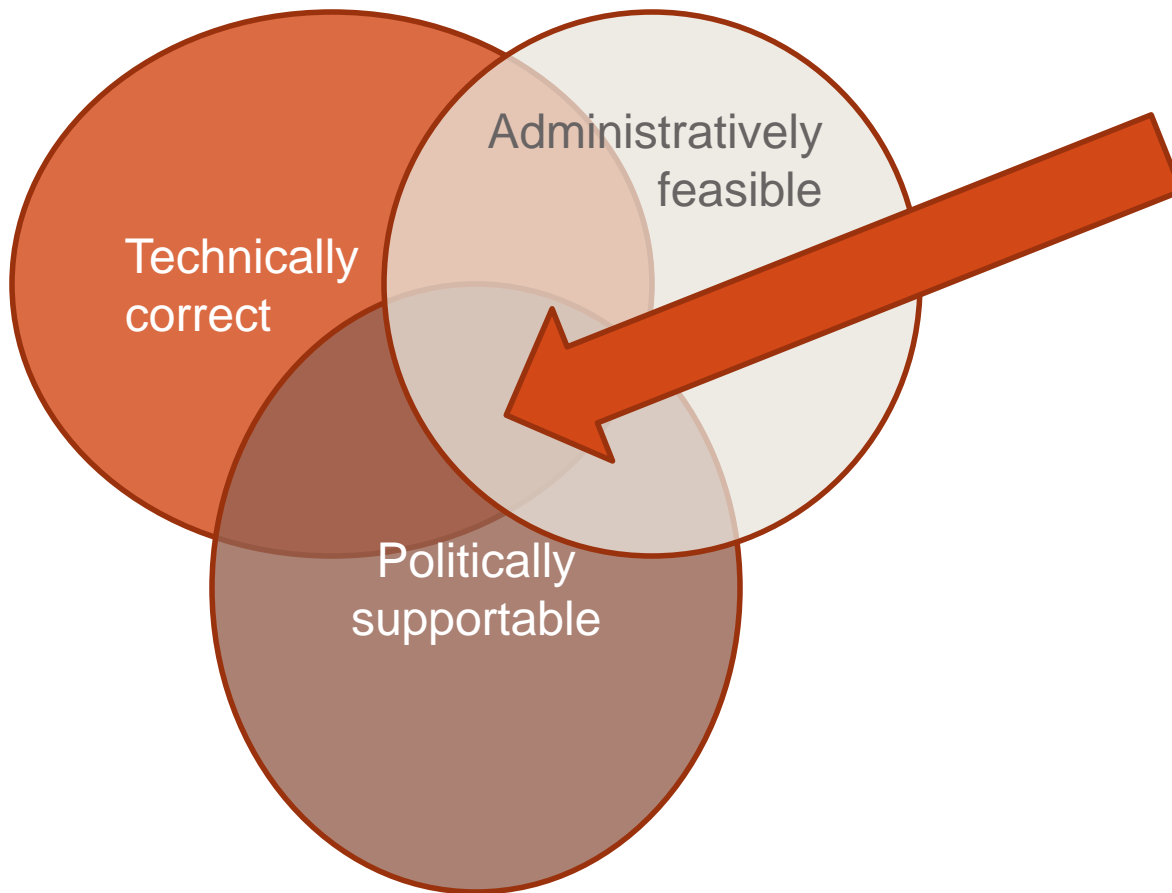

---

Bénédicte de la Brière, World Bank

Dec 6, 2013

# Three elements of policy design (Pritchett, 2005)

Achievable gains  
if ...  
the politicians, the  
**technicians** and  
the bureaucrats  
talk ...  
with the **citizens**

# Outline

1. Attitudes and perceptions matter
2. Electoral politics and implementation: a three-legged race for central and local governments
3. Organizational politics
4. Accountability in the new social contract

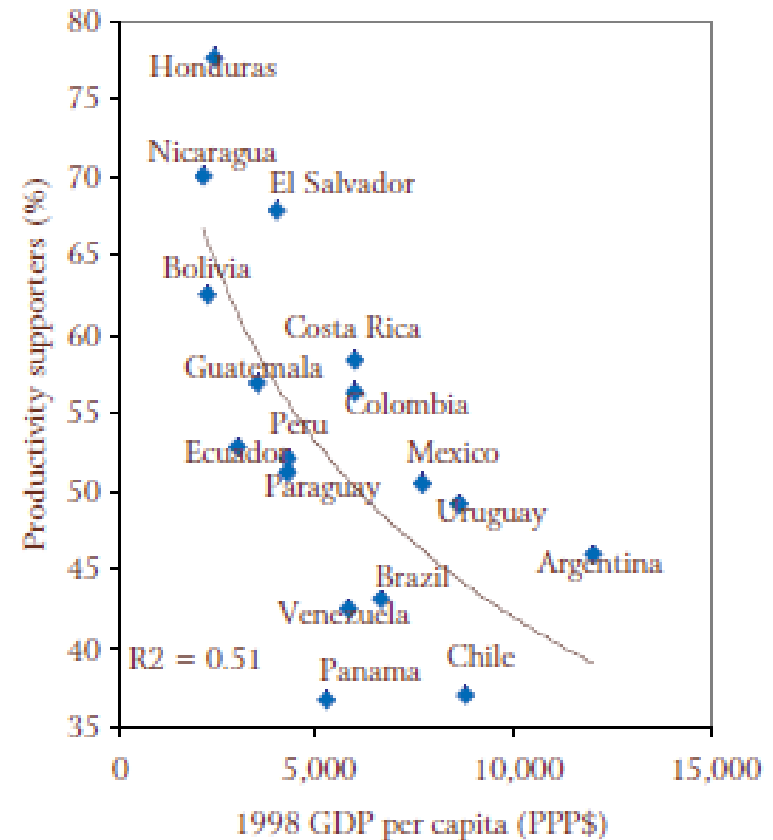

# 1. Attitude and perceptions matter

# Who should provide safety nets?

- Wide variability across countries about
  - Extent of **collective responsibility** for those who are unable to provide for themselves
  - Attitudes about **distribution of opportunities** and government's role in equalizing opportunities and outcomes

What does the country need most to get ahead, productivity growth or redistribution

Source: Graham, 2002.

# Who deserves assistance?

- More deserving if:
  1. Less in **control** of neediness
  2. Greater **need**
  3. Higher **identification**
  4. “Better” **attitude**
  5. Higher probability of **reciprocity** (past or future paybacks)

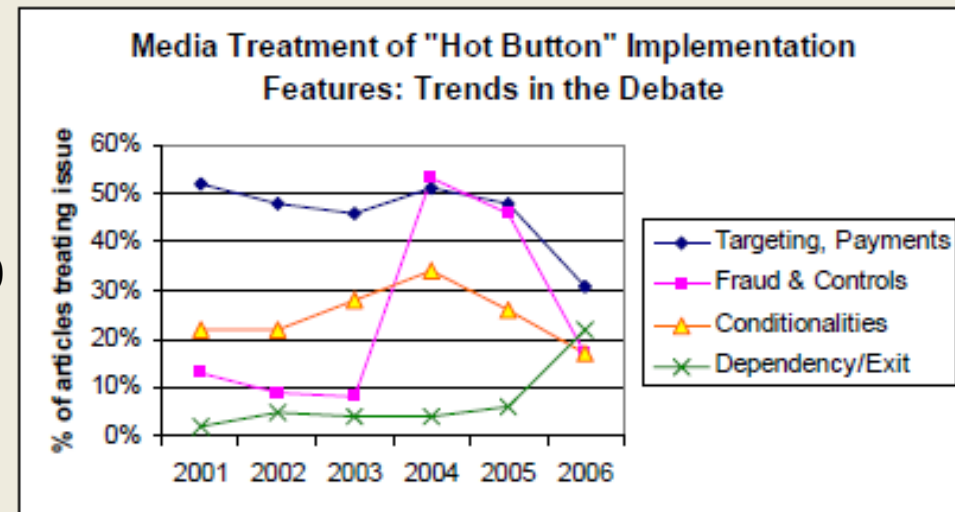

# Who deserves assistance? (2)

- Matter for :
  - Narrow/broad **targeting**
  - **Regional** disparity
  - Racial/ethnic diversity
  - **Welfare** and **workfare**
  - Types of **interventions** (cash, in-kind, subsidies, “education”, social work)
- The poor, the vulnerable and the middle class
- Do the “misfits” (i.e. Rom, children, single mothers) have rights?

# What do the public (and politicians) care about?

The press paid more attention to inclusion errors in electoral periods

Source: Lindert and Vincensini, 2010

## 2. Electoral politics and implementation: central and local governments

- Bolsa Escola (Janvry *et al.* 2005)
  - Study of 260 municipalities in the Northeast
  - Confusion about the roles of municipalities => heterogeneity of implementation
  - Greater electoral support if social councils existing, larger program coverage, low leakages to non-poor
- Corruption and votes (Ferraz and Finan, 2011 in Brazil)
  - Report of corrupt violations (CGU) decreases probability of re-election

# Central and local governments

- Local knowledge vs. Clientelism
- Central design/local implementation
- Funding sources (taxes, donors)?
  
- Progres/Oportunidades: started very centralized, now bringing states and municipalities back in
- Bolsa Familia: decentralized targeting based on allocations but centralized payments plus incentives
- CBT in Africa (make discretion explicit)
- Workfare more localized
- India: RTI as a way for local politicians to ally with citizens in controlling local administration.

# Central and local governments

- Fairness and transparency
- Grievance redress mechanisms
- Fairness and horizontal equity
  - «Like be treated alike» :
- Process and administrative fairness
  - Appeals at different levels
  - Process to update eligibility
- **Effectiveness** and results
  - Narrow targeting
  - Importance of M&E and results dissemination
  - Managing expectations (donors, staff, gvt, public opinion)

# 3. Organizational politics

- Fit between program and implementing agency
  - Ministry of Public Works in Indonesia in 1998 and labor-intensive building programs (quality of the works of the unskilled labor) vs. BULOG subsidized rice to half of Indonesia's households in 6 months
  - Moving RPS in Nicaragua from FISE to Ministry of Family

Heterogeneity of competencies

Wage and non-monetary compensation, training

Lack of competition

Beneficiaries can not walk away

Street-level bureaucrats key: who is their allegiance to?

Dealing with corruption

Simplifying program operations, automation

Increasing cost of corrupt activities to corrupt individuals

# Organizational politics

- **Fit between program and institutional framework**
  - Central vs local administration in low capacity environments
  - Strong interest groups (organized labor) may require adapting to their concerns
- **Expectation management**
  - Conditions in (C)CT as a way to build political support for transfer programs
  - (Workfare)-cum-nutrition as a way to build political support for nutrition interventions when employment is seen as more pressing
  - (Workfare) for women with children in PJH in Argentina in 2001
  - Role of public sector in ECA (compared to EAP)

# Organizational politics

- Who implements can affect support
  - Social Funds in LAC as a way to:
  - Moving Bolsa Familia from President office to MDS in 2006
  - Caisse de Compensation (subsidy funds) under PM and social programs under weak social ministries or powerful Ministries of Interior (Morocco)
  - Ministries of Labor or Social Assistance

**Placing a new program is an important decision and can affect political support (weigh pros and cons of options)  
Who controls the registry?**

# Politics of reform

- **When and how fast to move?**
  - **Constitutional changes:** South Africa, Brazil (Rights-Based SN) and paced implementation
  - **Consensus** on goals and commitment: US 1996 welfare reform, Colombia health insurance reform 1990s (with new push with Right to Health)
  - **Crises**
- Entrenched controversy: pilot, evaluate and scale-up if successful while building political support:
  - Progresa 1997, Oportunidades 2000
  - MENA 2013?
  - Africa CTs (with remaining questions about domestic ownership)

# Crisis: opportunity or obstacle to reforms?

- Building a complement to informal safety nets: Korea 1997 unemployment insurance

## ANALYSIS

### Safety Nets Help Europe Resist Stimulus

Protections for workers  
put in place long ago  
may lessen the need

Mar 27, 2009 6:53 AM CDT

- or providing perverse incentives to potentially productive individuals: Europe now?

# The Arab Spring?

- Traditional redistribution system through universal subsidies (food and fuel) and public employment
- Hard to sustain and disempowering

BUT

- New surveys in Egypt, Jordan, Lebanon and Tunisia show:
  - 90 percent think government should provide SN
  - Perceptions that present SN regressive
  - Low awareness
  - Preference for poverty targeting and cash

## 4. Accountability in the new social contract

- Rights based social agenda

Source: Zak Paster, *World Poverty and Human Rights*, Article 1, Spring 2010

- New relationships between civil society and the State
  - Democratization: **electoral** laws
  - Strengthening of the **rule of law**
  - Stronger **press**
  - Emergence of middle class
- And...
  - Erosion of **traditional safety nets** with repeated crises
  - Growing **disenfranchisement** (Arab Spring, Occupy)
  - Role of the State in service provision (transfers vs. services)

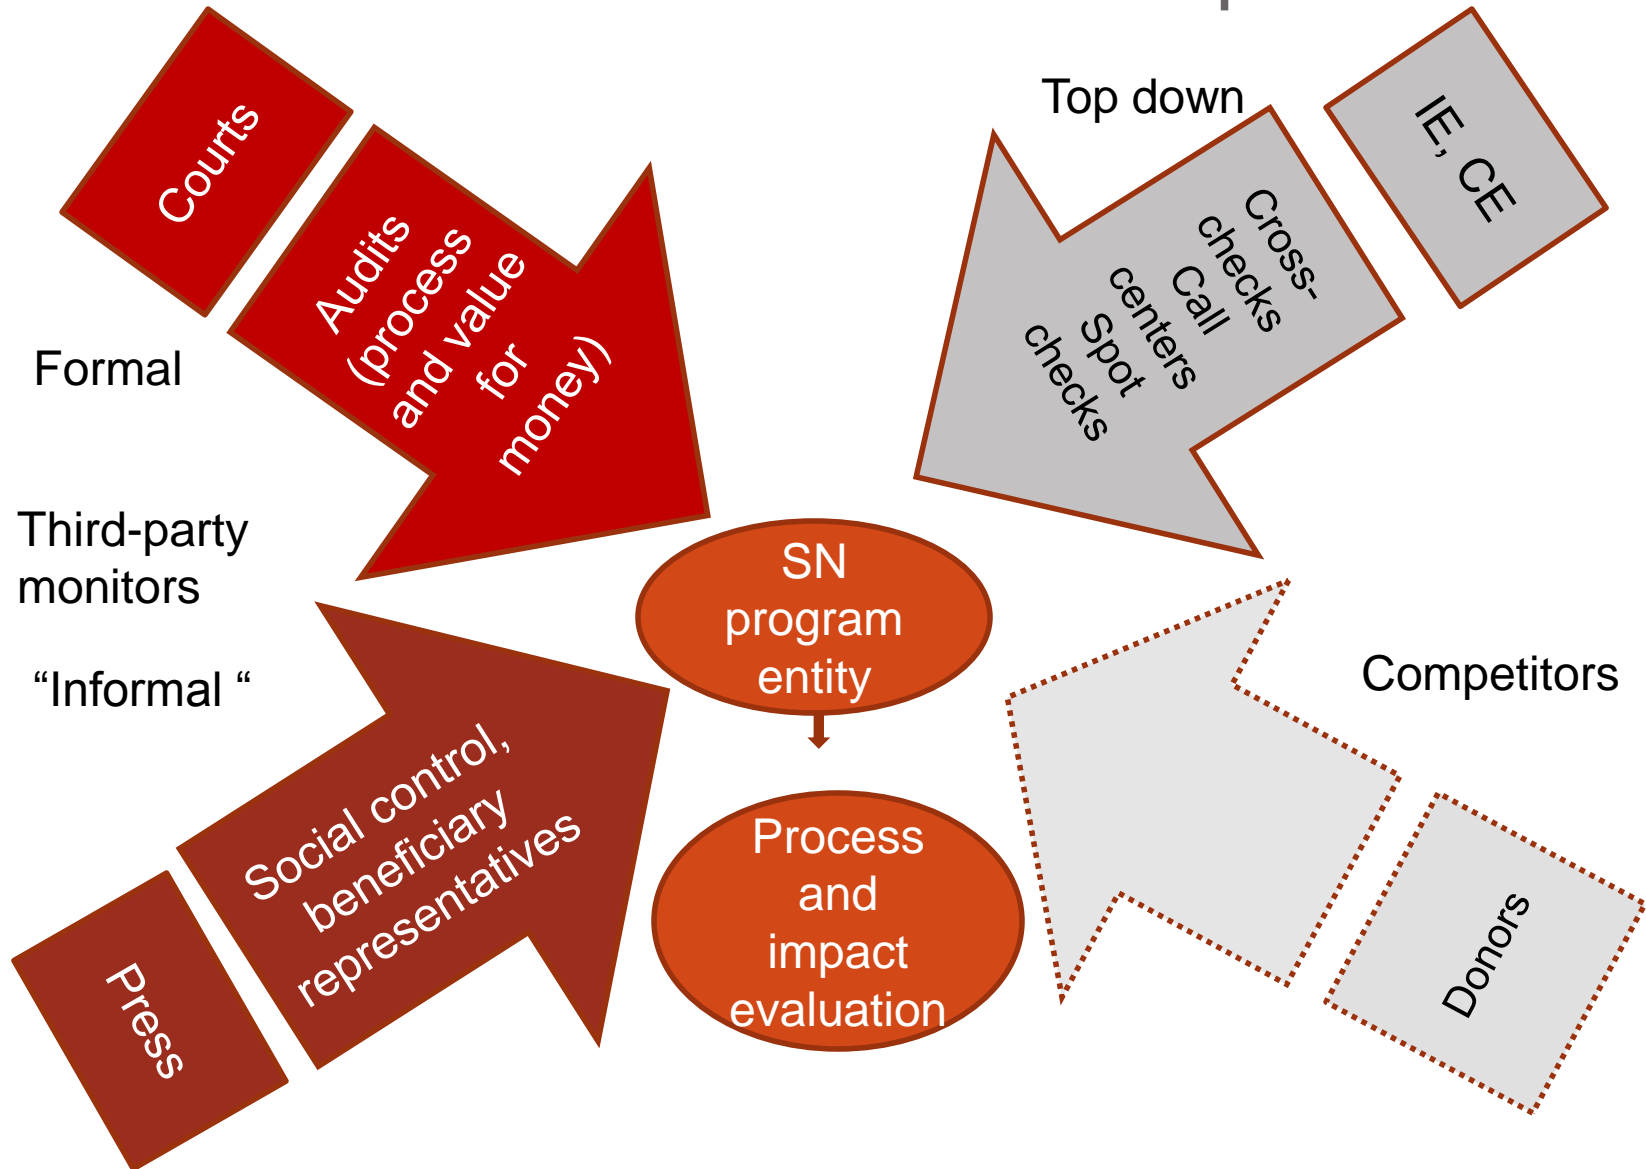

# Why does accountability matter in SN?

## Specific challenges

- Large number of vulnerable beneficiaries
- Shared program responsibilities across many gvt levels (central/local) and departments
- Highly visible programs

# How to Provide incentives to SN operators?

# Three Paths of Social Accountability

## 1. *Access to information and audits*

- Countries with A to I acts: x4 between 1995 and 2008

## 2. *Grievance redress mechanisms*

- Once informed, citizens need opportunities to transform information about standards and performance into actions

## 3. *Participation*

- Identity
- Community participation in targeting: from validation to decision (AFR CBT)
- Mechanisms for voice of beneficiaries

Training social auditors  
Kenya

# Three assumptions

1. People have the ability and incentives to access and use information. *But...*

*... citizens may have other priorities and information asymmetries complicate judging performance in targeting, quality of services*

2. People are willing to use information and redress channels to pressure policy-makers and providers. *But...*

*... citizens may be reluctant /skeptical to challenge authority.*

3. Policy-makers and providers (duty-bearers) will respond to citizen influence (as right holders). *But...*

*... changing behaviors and incentives is difficult and takes time.*

*...breaking with clientelism and nanny state culture is very difficult.*

# Key moments

**Informing beneficiaries:**  
AusAid Malawi

Informing beneficiaries:  
Oportunidades, MX

- A. Informing  
Communicating
- B. Targeting,  
Exiting re-  
certifying

**Targeting:** Applying in the  
UK

© JOHN COGILL

**Targeting:** Providing IDs to  
claim payments by mobile  
phone (phone contract).  
Concern Worldwide Kenya

# Key moments

Providing work in NREGA

- B. Providing services, work
- C. Paying
- D. M&E

Paying through the Army: Juancito Pinto BO

Paying through an ATM: Progresando con Solidaridad, DR

# Generations of Social Accountability

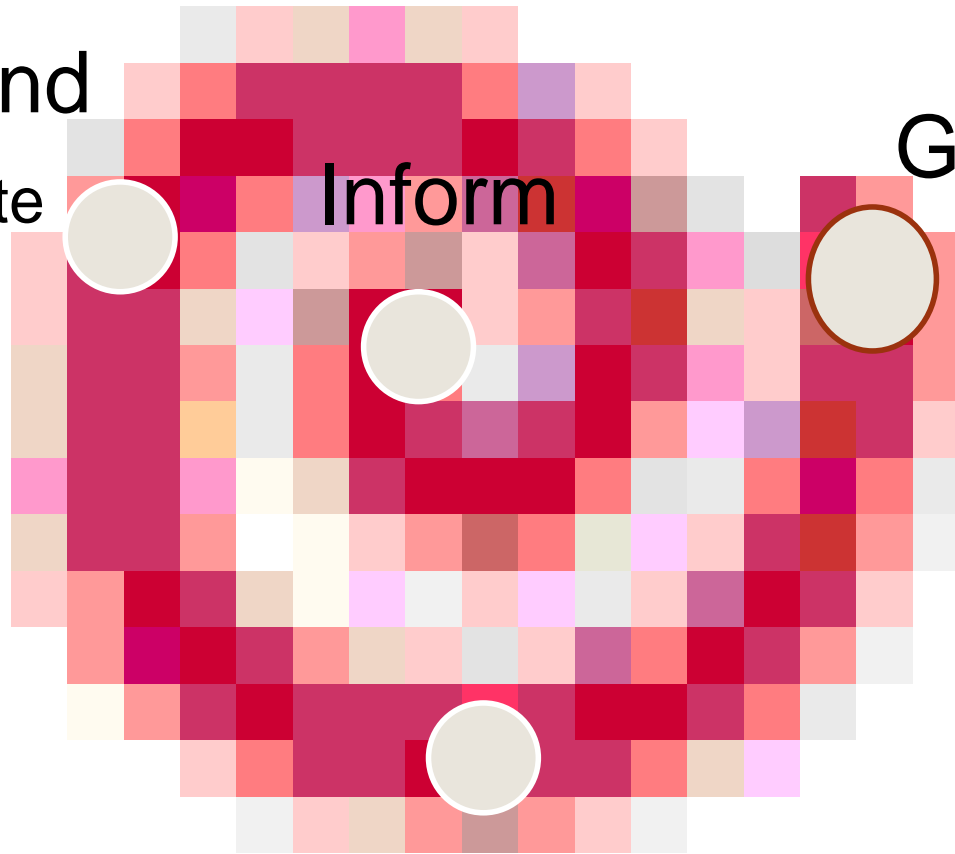

Understand

Communicate

Inform

Govern

Question

# A. Access to Information

## Inform: Publication

- Operational manuals (with standards for operation),
- Beneficiary lists (LAC)
- Rigorous independent IEs
- Some budget information

## Understand

- **Language**
- **Format:** IT (SMS) vs. people, social communication
- **Power issues:** Targeting (registries/programs), exit
- **Guaranteeing an answer to questions:**

## Question

- A to I acts and requests (IN)
- Making standards understandable (RECURSO PE, payment agencies)
- Beyond beneficiary satisfaction: (*Reportes Comunitarios* RD)

## Govern

- Formal and social audits and **performance of providers**
- Linking to program as part of performance management

# B. Grievance Redress Mechanisms

## Input:

Three types:

- Within govt (donor-funded) programs
- Independent redress institutions (CSOs, ombudsmen)
- Courts

## Understand

Two functions:

- Handling individual complaints (payments, poor treatment, eligibility)
  - Provide feed-back for improvements by aggregating
- Procedure matters

## Monitor

- Follow-up plans: (*Reportes Comunitarios RD*)
- Make it justiciable

## Govern

Follow-up to grievance (\$) especially where State is far)

What happens?  
What works?

# C. Participation

## Inform:

- Community validation of targeting (MX)
- Social control committees (BR)  
Program information w/ enlace/madres-líderes model (MX, PA)

## Understand

- Include youth in decision-making
- *Community-based targeting*; checks and balances
- **Vulnerabilities:** gender, ethnicity, exclusion

## Question

- Participatory evaluation?
- Giving cash vs. improving services
- Why a given intervention? A contract, an investment or a right?

## Govern

Coordination with local managers  
Provide opportunities

Putting \$ to intentions  
and not increase  
opportunity costs

# Challenges

- “Plus ça change”

## Bolsa Família beneficiava 2,1 mil políticos eleitos em 2012

· Ministério do Desenvolvimento Social cancelou repasses após identificar irregularidade

TWEET

COMENTAR

DEMÉTRIO WEBER (EMAIL · FACEBOOK · TWITTER)

Publicado: 11/10/13 - 12h41 Atualizado: 11/10/13 - 13h11

... à Fome  
identificou 2.168 políticos eleitos em 2012, a maioria vereadores, que continuavam recebendo benefícios do Bolsa Família após tomar posse, o que é proibido. A irregularidade foi constatada no início do ano, após cruzamento da lista de beneficiários do Bolsa Família com dados do Tribunal Superior Eleitoral, conforme divulgou nesta sexta-feira o “portal iG”.

- The long route to accountability or... favors at scale?

Again the political economy of:

- who the deserving poor are
- **who funds** the program

frames accountability relationships

# In the long-run

Rise in per capita incomes

Expansion of the right to vote

Increase in taxation for wide-base social safety nets

Expansion of SSN (except maybe in ECA?)

Universal services + insurance (good to bad states)

Social transfers as a percent of GDP, OECD, 1930 -1995  
(Lindert 2004 and Pritchett 2005)

## Now:

After the double  
FFF crisis:

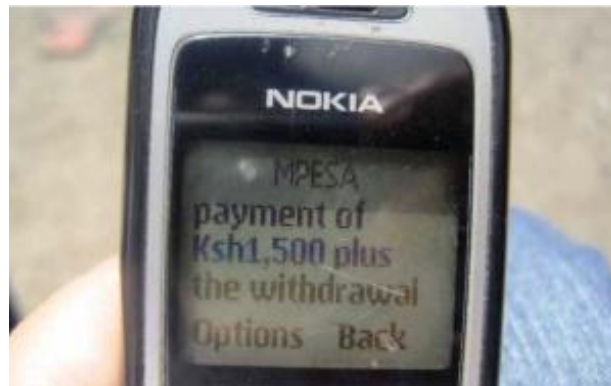

High  
unemployment  
Youth  
unemployment

New  
vulnerabilities:

- Rapid aging
- Churning  
around the  
poverty line

- Who votes (SN bring votes)?
- Who scares politicians?
- Who will benefit most?
- What's feasible?

# Conclusions

Every society has its **own values** about

- The deserving poor
- Who is responsible to support them
- Policy-makers need to be attuned to them to run successful safety nets and navigate:
  - Politics of **budget**
  - **Inter-organizational** politics
  - **Bureaucratic capacity** and organizational dynamics
  - **Public opinion** expectations
- **The first best technical solution may not be the best fit**
- **Social accountability alone will not fix program management issues**
- **Technical process change faster than political ones... but not always**
