n.a. Precise figures not available.

a. World Bank Atlas methodology; per capita GNI (gross national income, formerly GNP) figures are in 2000 U.S. dollars.

b. Countries are eligible for IDA on the basis of (a) relative poverty and (b) lack of creditworthiness. The operational cutoff for IDA eligibility for fiscal 2002 is a 2000 GNI per capita of \$885, using Atlas methodology. To receive IDA resources, countries also meet tests of performance. In exceptional circumstances, IDA extends eligibility temporarily to countries that are above the operational cutoff and are undertaking major adjustment efforts but are not creditworthy for IBRD lending. An exception has been made for small island economies (see footnote c).

c. During the IDA-12 period (fiscal 2000–02), an exception to the GNI per capita operational cutoff for IDA eligibility (\$885 for fiscal 2002) has been made for some small island economies, which otherwise would have little or no access to Bank Group assistance because they lack creditworthiness. For such countries, IDA funding is considered case by case for the financing of projects and adjustment programs designed to strengthen creditworthiness.

d. Loans/credits in nonaccrual status as of July 1, 2001.
