<b>Notes</b>										
	A value of "new" under the Update Status" column indicates that the RAI estimate of a country has not been published previously.									
	Total and rural population figures for countries with no RAI estimate (in italics) are not included in regional totals (first row) but included in the total rural population of a region (second row).									
	All population figures, except for Iraq and Nigeria, are for 2004. Total and rural population figures for Iraq are for 1999.									
++	The Nigeria CWI is based on an eight state sample which represents 34,742,392 of the rural population. Thus, the rural access indicator refers to the portion of the rural population represented in the survey. Both total and rural population figures are for 2003.									
*	Based on the Poverty Monitoring Report for Rural China, 2003, a publication by the Chinese Government. The figure represents that 97% of Chinese villages (which include rural townships & administrative villages) are accessible by road.									
**	The rural access indicator has been established using mapped information and GIS information.									
***	Based on the Pradhan Mantri Gram Sadak Yojana (PMGSY) Briefing Book, 2006, a publication by the Indian Government. The figure indicates that 61% of habitations with population more than 250 people are within 0.5 kilometers of all weather road.
