

Asia Post-Tsunami Recovery: India, Indonesia, Maldives, Sri Lanka

Lessons from the past:

- “Recovery” is an artificial term (understand timelines)
- Focus more on livelihoods
- Community-driven approaches work best

Challenges for recovery:

- Zoning and resettlement
- Ensuring consistent approach with so many players
- Balancing urgency with need for long-term vision (risk reduction, environment, etc.)
- Sensitive post-conflict environment – need transparency and equity in order to do no harm
