

G2P DIGITIZATION IN PRACTICE SERIES

Brazil's Auxilio Emergencial:

How digitization supported the response to COVID-19

Co-hosted by

UK Government

WORLD BANK GROUP
Social Protection & Jobs

OPENING REMARKS

Michal Rutkowski, Global Director for Social Protection and Jobs, oversees the World Bank Global Practice responsible for protecting poor and vulnerable from shocks through improving their job opportunities, earning capacity, and social insurance and social assistance (safety net) coverage. Until July 2016, he was the Director for Multilateral Organizations, and prior to that the Country Director for the Russian Federation and the Resident Representative in Moscow for three years. In the period 2004-12, he was Sector Director for Human Development in the Middle East and North Africa and then South Asia regions of the World Bank.

OPENING REMARKS

Luiz Galvão, Executive Secretary in the Ministry of Citizenship, He is a specialist in public management. Galvão built his public career in the city of Salvador where he worked in the implementation of the first Municipal Hospital in Salvador and delivered 14 new basic health units. Between July 2019 and February 2021, he was the municipal secretary of Community Articulation among Neighborhoods and the City Hall from Salvador. In this experience he acted to coordinate and implement decentralized actions, bringing the management closer to the population.

SPEAKERS

Tércio Almir Brandão Santana is currently the Secretary at the Single Registry National Secretariat, from the Ministry of Citizenship, Brazilian Federal Government. He built his trajectory in public management in the city of Salvador, Brazil, where he has occupied several positions from 2013 to 2019, as Coordinator of Management Modernization, Manager of Modernization Projects, Director of Health Care and Special Advisor of the Secretary of Community Articulation.

SPEAKERS

Alan do Nascimento Santos is a public servant from the Brazilian Social Security Institute (INSS) since 1995. In 2015, he was transferred to Dataprev, a public social security technology and information company. He holds a degree in History, and a Master's in Organizational Architecture and Modeling Processes. He has intensively participated in several projects of modernization and digital transformation in social security and social assistance in Brazil.

SPEAKERS

Pedro Lara de Arruda has over 12 years of work experience in research and international development. Before becoming a Consultant to the World Bank in 2021, Pedro worked as researcher at UNDP's IPC-IG. He has authored over 40 publications based on his work experience with of over 20 developing countries in Latin America, Africa, the Middle-East and Asia

Summary

- Context of the Emergency Aid (EA) and the Extension of the Emergency Aid (EEA)
- Main challenges to the implementation of the EA
- Design of the EA
- The EA in numbers: 2020 and 2021
- Innovations in the EA and EEA
- Lessons learned
- The New Single Registry Project

Context

- The **pandemic of Covid-19** was the greatest challenge of the current generation
- It created a **public health crisis** and a **very serious socioeconomic situation** that affected severely the population, especially the workers of the informal sector.
- The federal government had to create the **legal framework**, the **institutional arrangements** and the **governance structure** to implement the EA in a very short period.

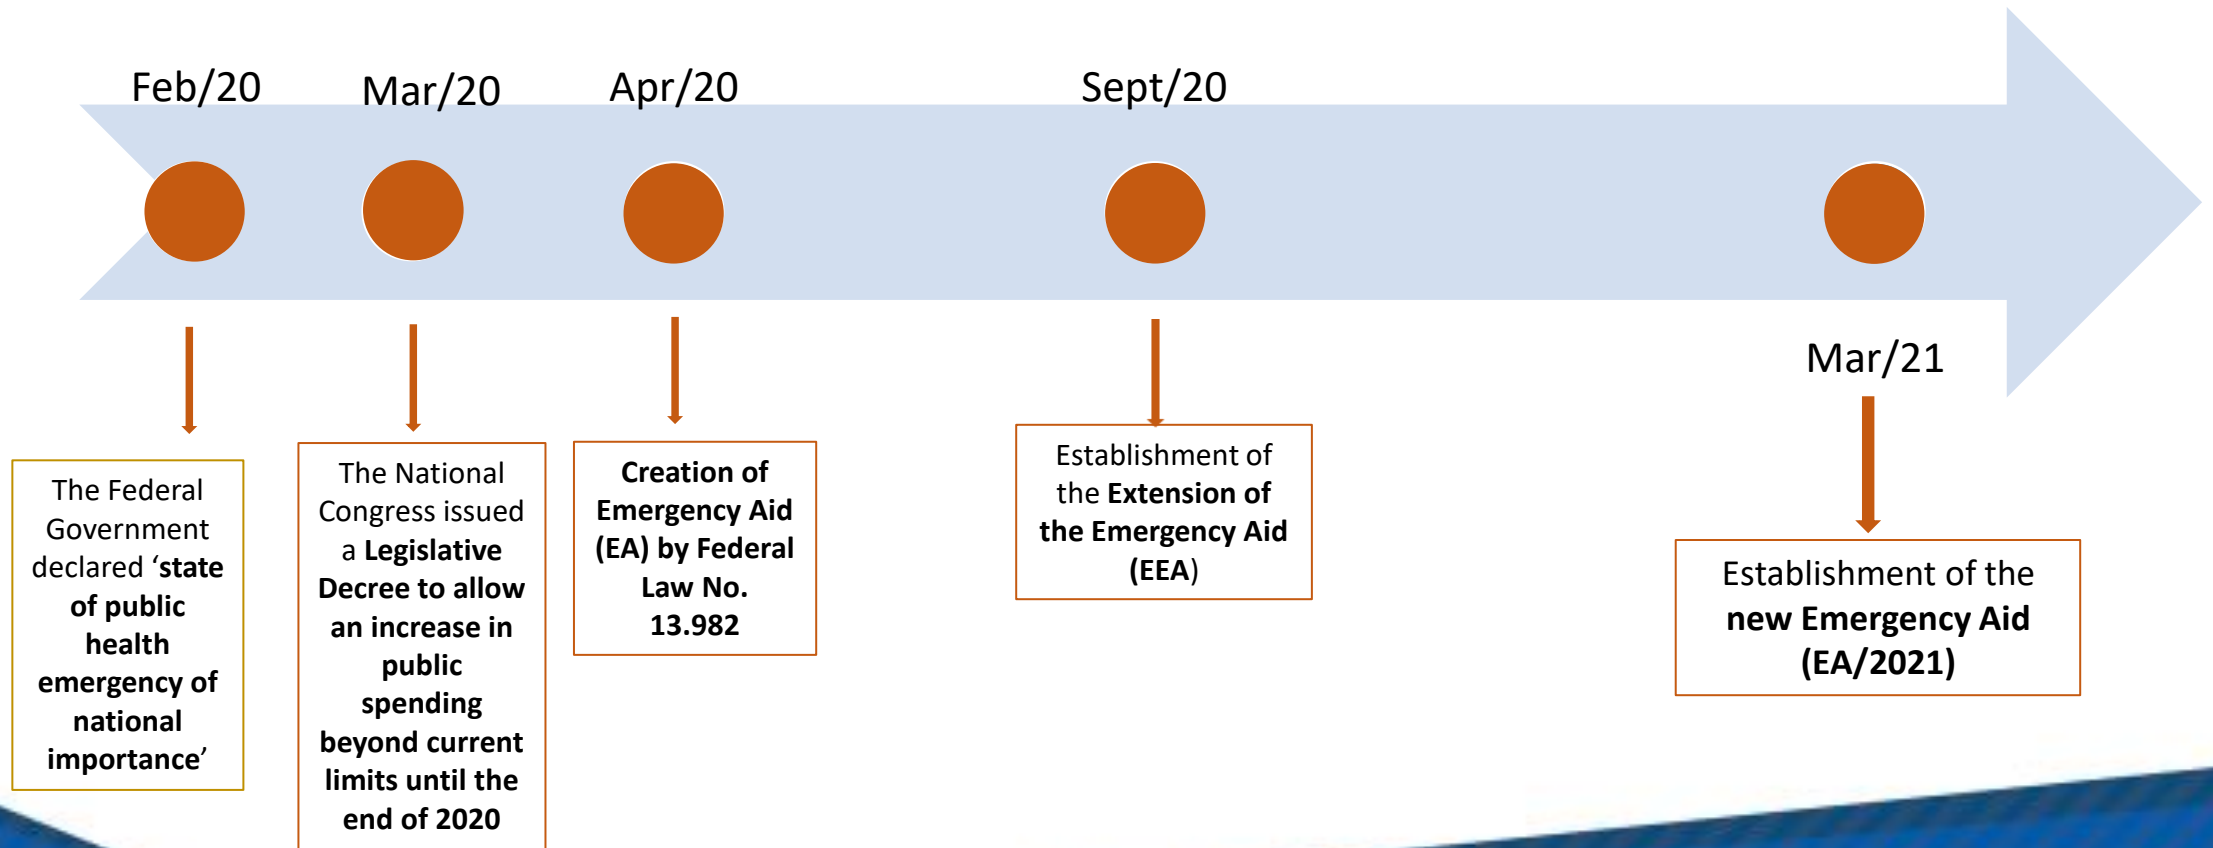

Emergency Aid: the Brazilian response

Main challenges

- **Identification of millions of informal workers** through the **intensive use of technology**
- Importance of maintaining **traditional ways of identification** available for segments of the population not digitally included
- **Closure of local agencies of Social Assistance in 2020** due to social isolation measures
- **Need to rely on public data bases** created to another ends, without liaison variables and updated at different intervals.
- **Specific payment logistics** to different types of target groups
- Allocation of an **extraordinary amount of resources** to pay the new benefits
- Need to have **emergency contracts** with executing institutions of the EA

Emergency Aid: a rapid response

The objective of both Emergency Aid (EA), its Extension (EEA) and the Emergency Aid 2021 (EA 2021) is to **guarantee a regular flow of income** to the most vulnerable population with lower levels of per capita income, due to the continuing economic crisis generated by the COVID-19 pandemic.

Emergency Aid: a rapid response

- **The largest income transfer in Brazilian history** considering the number of beneficiaries and the size of the allocated budget
- It involved various actors in **all state branches** and the three levels of government
- Operation organized in a **very short time** (the first payments were made six days after the approval of EA law)
- More than **R\$ 304 billion in benefits** – U\$ 53.61 billion (1U\$ = R\$ 5.67)
- Bolsa Familia beneficiaries received the EA if the value was higher than regular BFP benefit

Emergency Aid 2020 and 2021

1 U\$ = R\$ 5,67

Emergency Aid 2020: beneficiaries profile

30,4 million

37,8 million

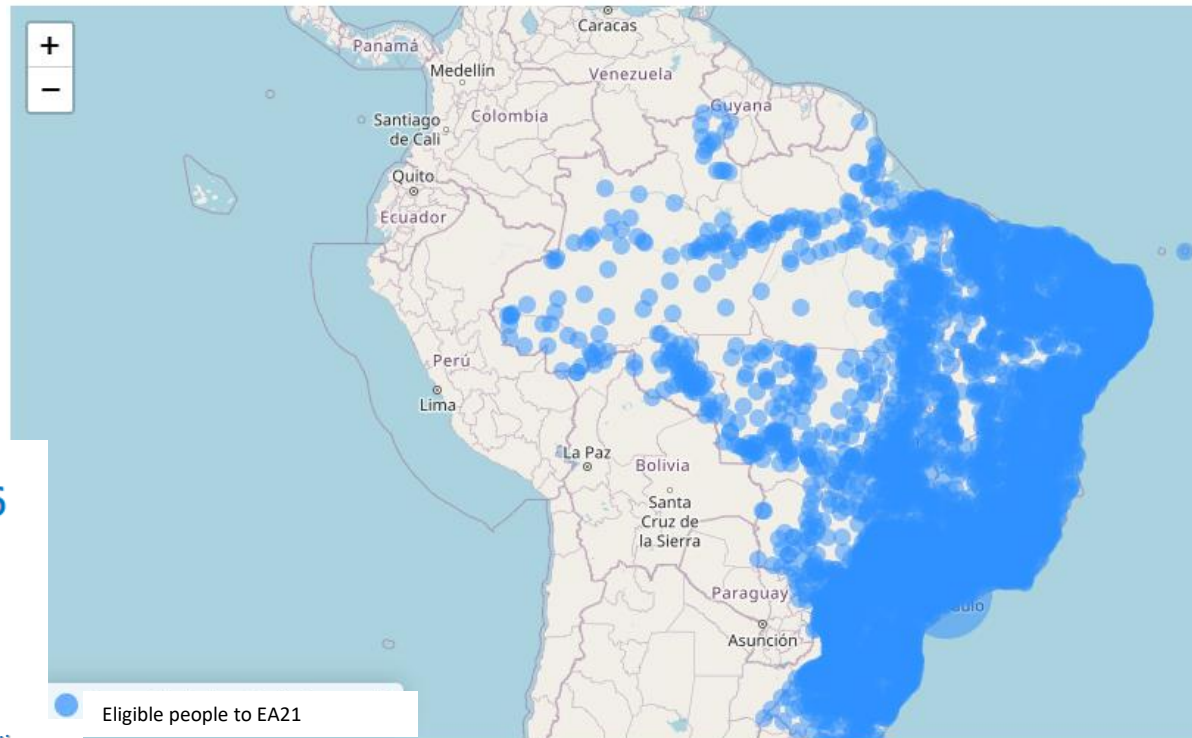

118.807.066

Innovations in the EA and EEA

Demand analysis

Registration and selection

Payment system

Program management

Intensive use
of Information
Technology

Innovations in the EA and EEA

Demand analysis

- **Use of the Single Registry** to identify and select 16% of EA's beneficiaries
 - Including the most vulnerable families and Specific and Traditional Population Groups (GPTes)
- **Data crossings between official databases contributed to improve the focalization of the EA**
 - Use of the National Registry of Social Information (CNIS) to access administrative, labor market and social security data of applicants to the EA.

Innovations in the EA and EEA

Registration and selection

- **Availability of digital channels to access the EA**
 - Development of an app to the requisition of the benefit; it had 115 million downloads (GoB, Agência Brasil 2020), 57 million requisitions and 38,2 million of approved requests.
 - The **ExtraCad** gathered data from more than 38 million informal workers not included in the Single Registry
- **Verification of the eligibility to the EA through massive treatment of data**
 - Development of a **Analytic Database** with more than 250 million Personal Physical Certificates (CPFs) and information about formal employment relationships and income from 42 administrative registries
- Establishment of a **Management Committee** with participation of control agencies to minimize inclusion errors
 - Improvement of protocols and registers of the Analytical Base
- **Monthly verification of eligibility through crossing of administrative databases**
 - From EEA on (also called EA 2)

CAIXA

Para quem se destina?

Para ter acesso ao Auxílio Emergencial, você deve cumprir, ao mesmo tempo, os seguintes requisitos:

Leia com atenção as informações abaixo. Você precisa se encaixar em **todas** elas.

Tenho mais de 18 anos

Não tenho emprego formal

Não recebo os seguintes benefícios

- Previdenciários (INSS)
- Assistencial
- Seguro-desemprego
- Programa de Transferência de Renda Federal (Bolsa Família não impede receber Auxílio Emergencial).

A renda mensal, por pessoa, da minha família não ultrapassa meio salário mínimo (R\$ 522,50)

Innovations in the EA and EEA

Payment system

- Automatic creation of a free **Digital Savings Account** (DSA/PSD) to all beneficiaries
 - Aimed to promote digital operations and savings
 - Inclusion of vulnerable people in the banking system (around 48.6 million new savings bank accounts)
 - Possibility of payments using virtual debit card
- **Maintenance of payment calendar of BFP**
 - Cash retrievals allowed to BFP beneficiaries
- **Interval between crediting the benefits and cash retrievals**
 - To avoid agglomerations and to stimulate the use of digital transactions
- **Automatic devolution to the National Treasury of benefits not withdrawn in 90 days**
 - Extended period to BFP's beneficiaries and indigenous people of the Single Registry
- **Monitoring of payment operations**
 - Identification of the most used sites of cash retrieval to be used in future emergency situations

Innovations in the EA and EEA

Program management

- Improvement in the **governance structure** of the Ministry of Citizenship
 - Different roles of SECAD and SENARC in EA and EEA
- Automatic **mechanism to contest non-eligibility in the app and website**
 - Needed because of the intensive use of administrative registers in the selection of beneficiaries
 - Allowing applicants to present complimentary information
- **Partnership with DPU** to optimize the management of extrajudicial contestations
 - Presentation of documental proofs to the instruction of administrative processes
- **Partnership with CNJ** to promote access to administrative data related to judicial disputes

Innovations in the EA and EEA

Program management

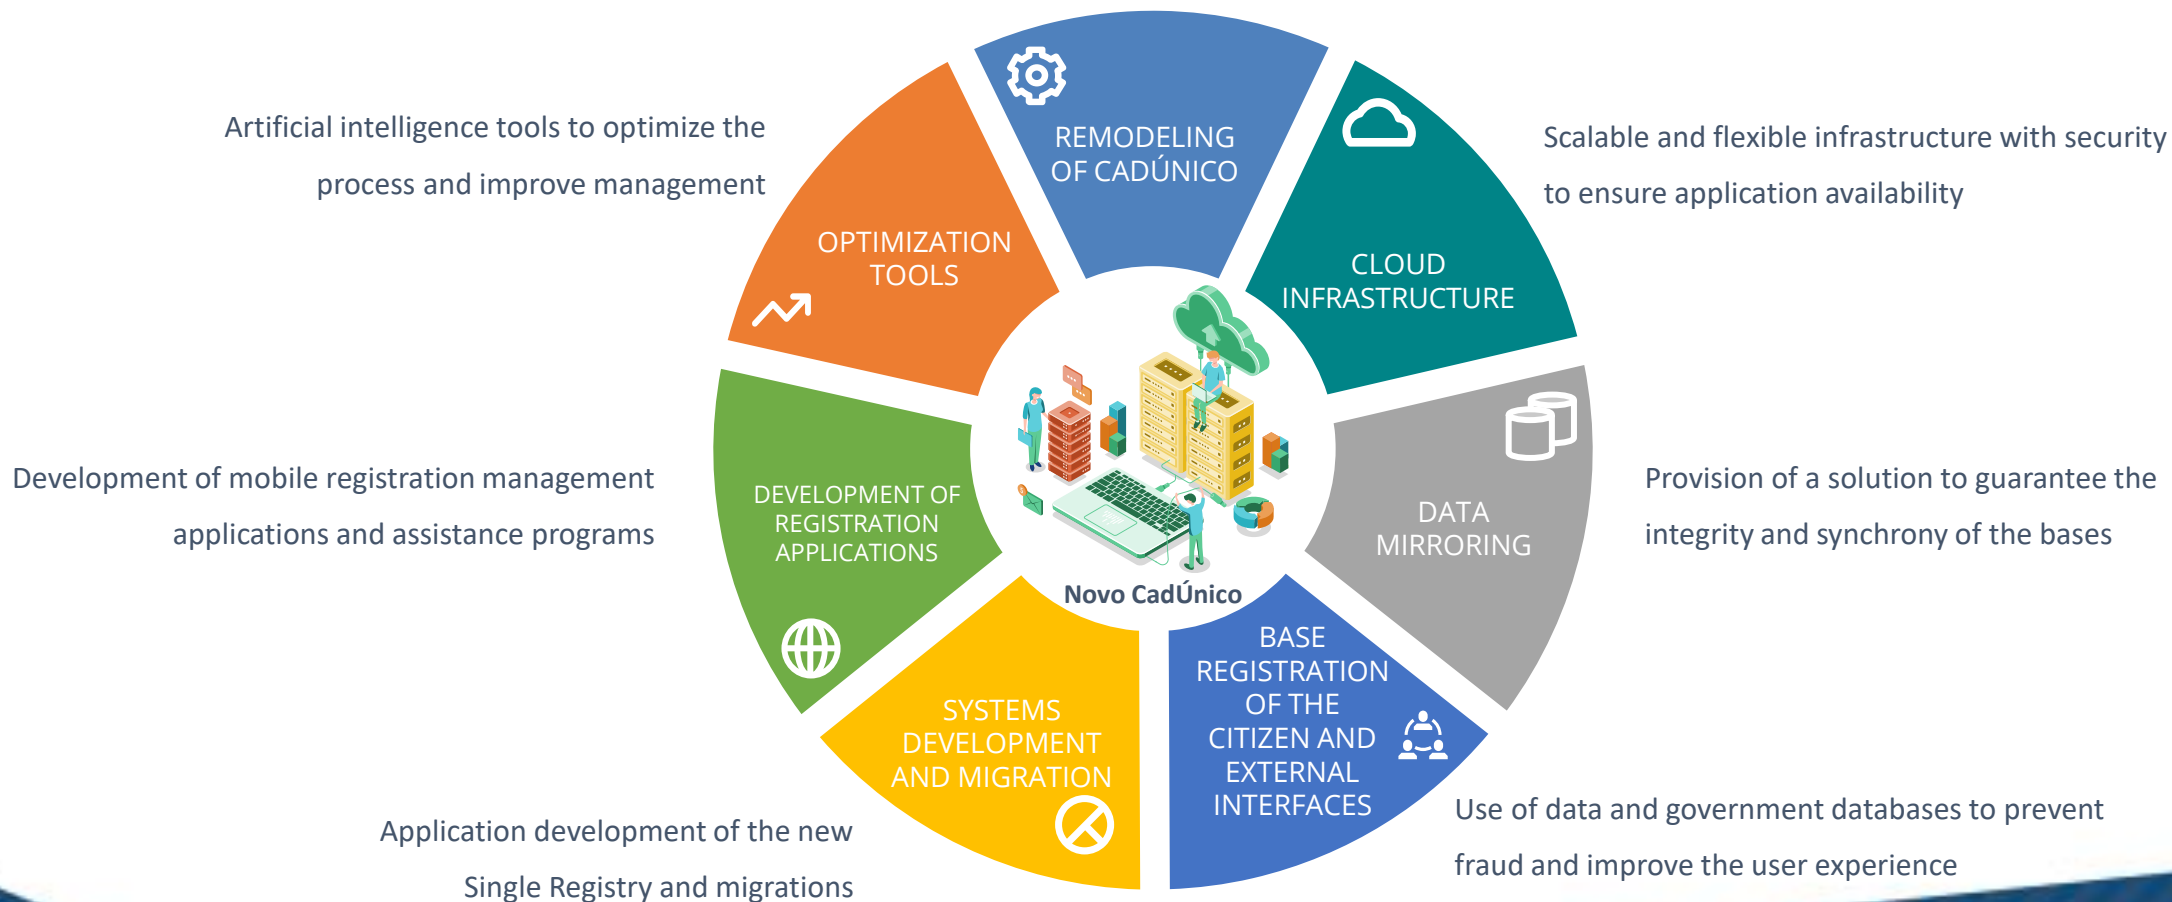

- **Recuperation of unduly paid values**
 - Repression of organized frauds
 - Behavioral incentives to voluntary devolution of unduly paid benefits
 - Integration with the Internal Revenue Agency (SRF) to demand the devolution of unduly paid values in the annual declaration of income tax
- Construction of **databases with evidences of frauds** to be used by the operators of EA
- **Social communication campaign** about the EA

Lessons learned

- The need to **promote the integration of official databases**
- The **role of information technology** in designing and implementing social programs and in the periodic revision of eligibility criteria
- The need of **official grievance mechanisms** to allow applicants to contest administrative decisions
- The importance of social transfers to maintain a **minimum level of well-being of the most vulnerable segments of the population**
- The need to **improve and expand the cash transfer programs** to guarantee a minimum income level to those families, especially after the end of the Emergency Aid 2021.
- The necessity to resume the monitoring of **conditionalities** on education and health in the new Brazil Aid Program (BAP)
- **The opportunity to improve the Single Registry**

New Single Registry Project

Remodeling and normalization of the base of
the single registry to support the project

What the world thinks about the EA

International Monetary Fund (IMF)

- In the five first months of the program, the transfers increased in 19.8% the average income of the 40% poorest families, considering the income levels previous to COVID (Brazil Staff Report for the 2020 Article IV Consultation, page 11).

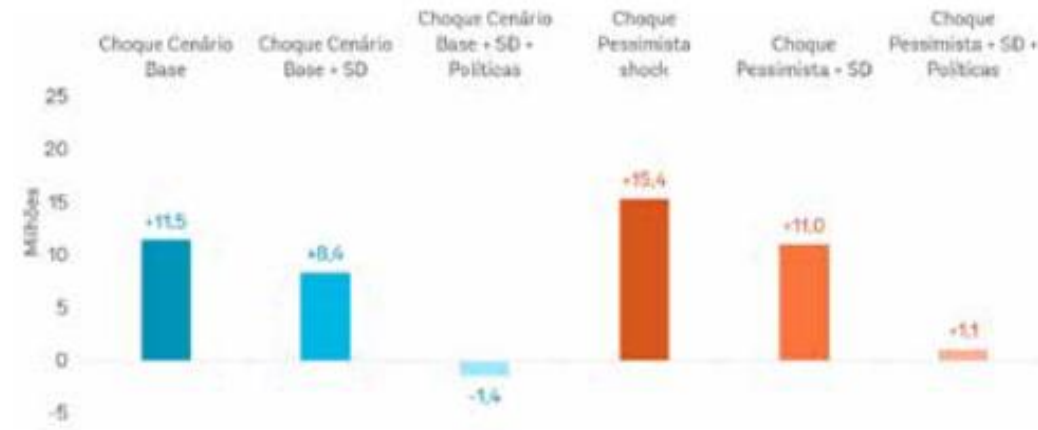

World Bank

- To face the crisis, the Brazilian government approved a program of financial support equivalent to 8,6% of GDP (COVID-19 in Brazil: Impacts and Policy Report, pg. 56).
- The high generosity in the EA's payments (R\$ 600 – U\$ 106,82) compensated completely the shock in the income of the 60% poorest in the population. In the EEA, the benefit of R\$ 300 (U\$ 52,91) mitigated the impacts of the crisis in the income of the 45% poorest (COVID-19, Labor Market Shocks, and Poverty in Brazil: A Microsimulation Analysis, pg. 29; data considered until June 25th 2020)

What the world thinks about the EA

World Bank

- According to a WB simulation, without reaction from the government the base and pessimistic scenarios would increase the number of Brazilians considered poor from 11,5 million to 15,4 million people (COVID-19 in Brazil: Impacts and Policy Report, pg. 11-13)
- The figure shows the number of new poor according to the base and pessimistic scenarios (in millions of people at national level, average during 2020)
- The bars labeled as “+ SD: Unemployment Insurance” shows the number of new poor after considering the income protection of formal workers.
- The bars labeled as “+ SD + politics” report the number of new poor after considering the income protection of formal workers, the expansion of BFP and the EA.

Methodology for Application of the Eligibility Assessment Databases

#brasilconteconosco

USED DATABASES

Information groups

Personal Data

For the identification data, the MDM bases are used (better natural person data updated from the crossing of information from the CNIS sources (INSS, RFB, Caixa and BB))

CPF status data comes directly from RFB with specific treatment

The daily update rule shall be applied to the death data

Income Data

Uses the best available data according to the CNIS prevalence rule

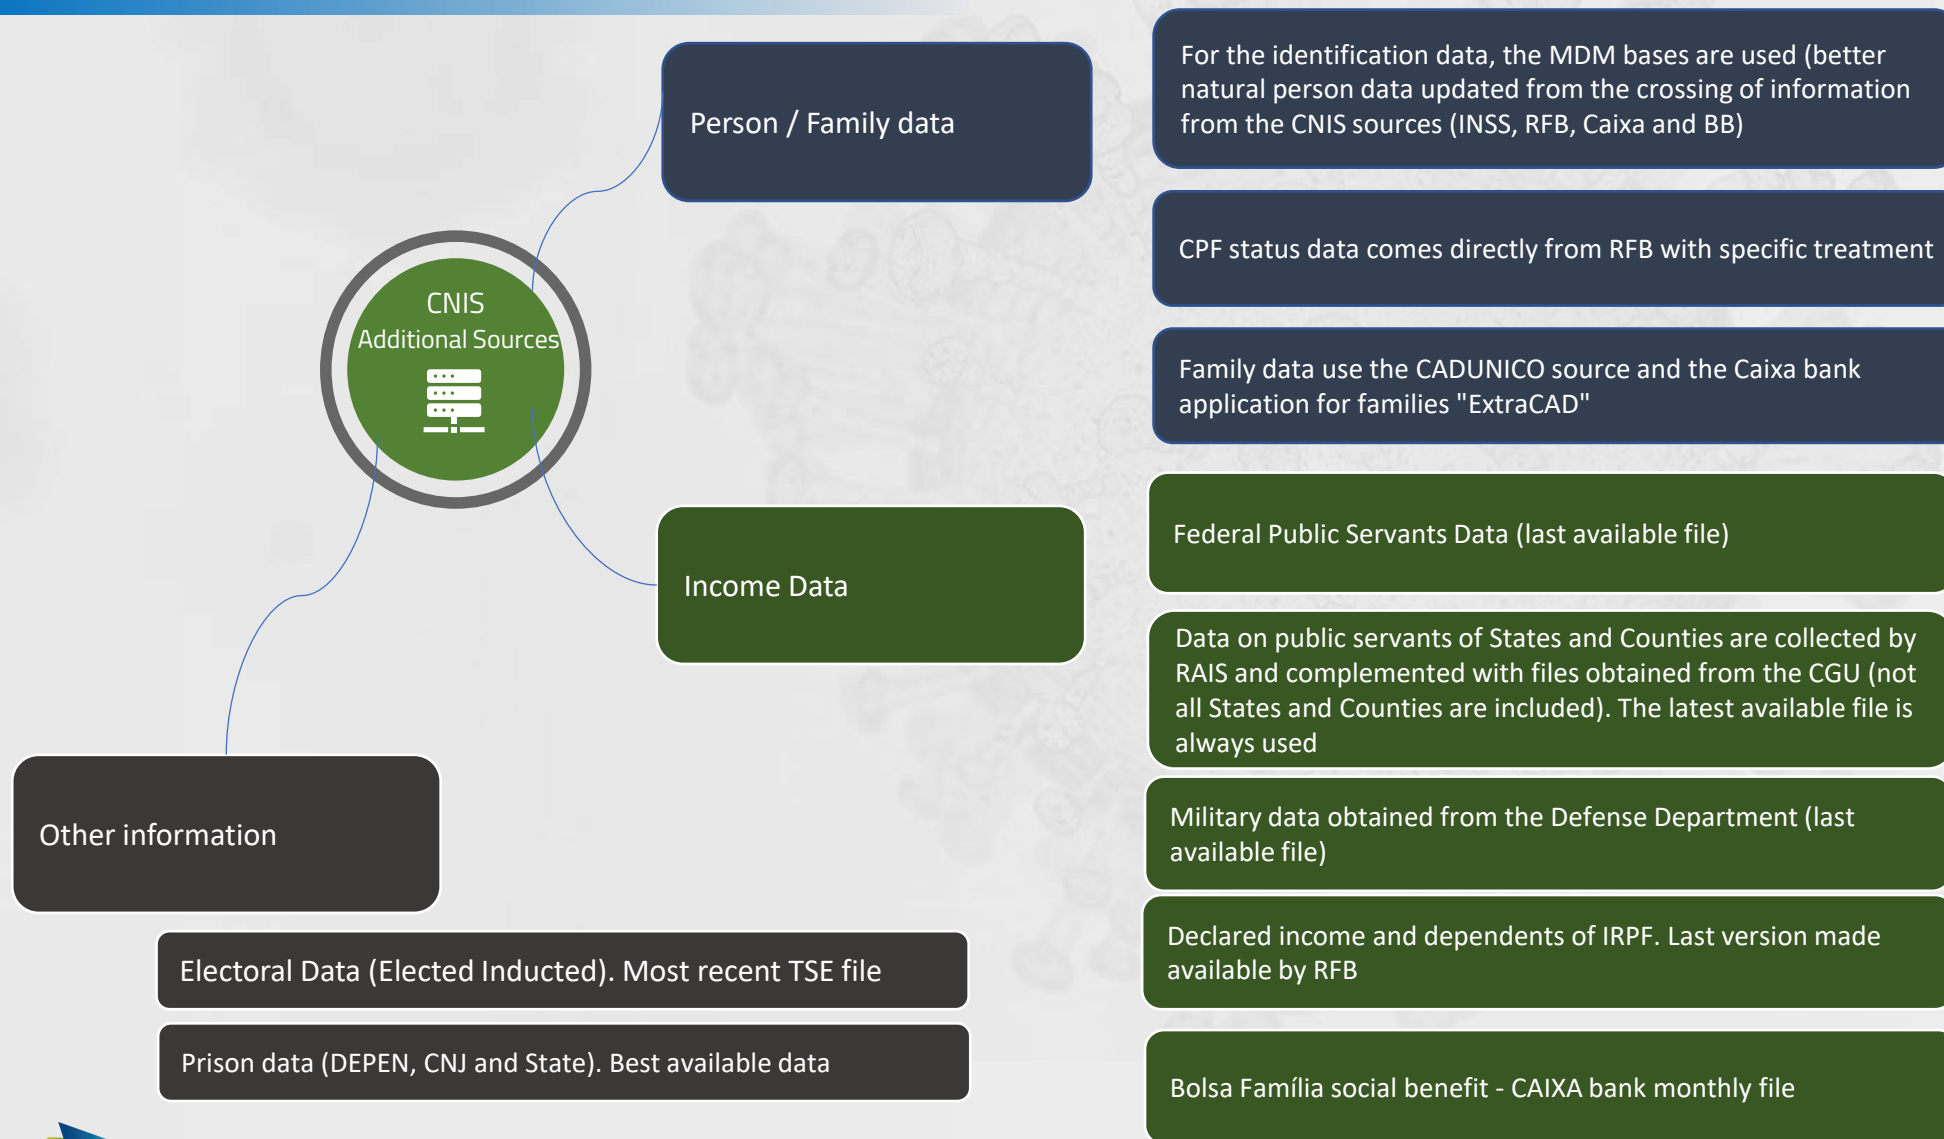

The sources from the companies (RAIS, GFIP, eSocial) follow the update rule of each service, and are subject to the respective latency. The data sent are the responsibility of the employer, and may generate errors and outdated

The sources from INSS are updated in real time until the cut-off date of the Monthly Analytical Basis

The cut-off date of the Monthly Analytical Basis is determinant for the degree to which it is updated.

The information is used based on the criterion of the most current base available on the cutting date of each competence

Information groups

Setting the analytical basis cut-off date

- Information is populated in the analytical base with the best available version up to the cut-off date
- The environment processes and applies the rules of prevalence and association of data from the rules defined by Ministry of citizenship
- Rules are revalidated and adjusted on a monthly basis, as detailed in the Technical Note produced for each processing

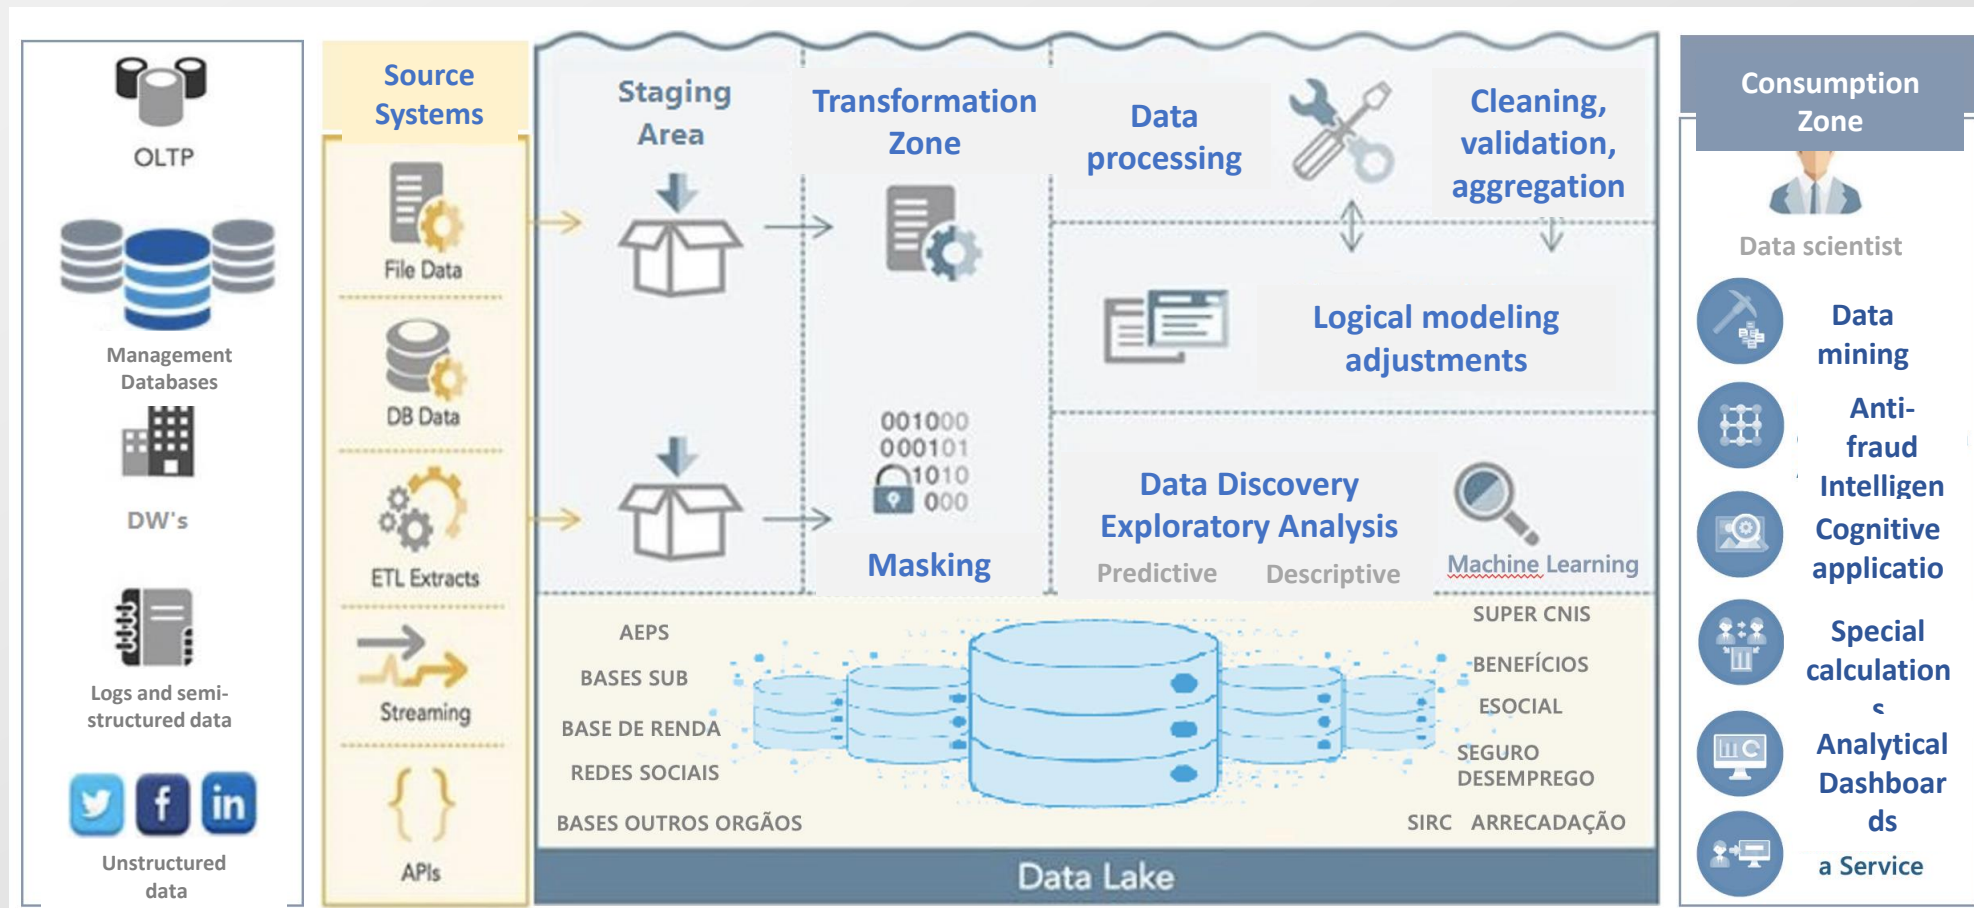

Processing and Validation

- The processing is made available for validation by Ministry of citizenship, based on the established criteria. If necessary, adjustments are made
- At the end of the validation process, Ministry of citizenship enters the payment flow with Caixa bank. The Ministry of citizenship authorizes Dataprev to send the file to Caixa bank

Payment

- Management of the payment cycle is between Ministry of citizenship and Caixa bank
- Dataprev also makes available the files of complementary payments (judicial, unblocking, deferred administrative challenges)

AUXÍLIO EMERGENCIAL'S PAYMENT SYSTEM AND THE FAST DISSEMINATION OF THE DIGITAL SAVINGS ACCOUNT.

*Sharing and Institutionalizing lessons learned from
Brazil's Social Protection response to Covid-19*

AE'S PAYMENT SYSTEM IN A NUTSHELL

Poupança Social Digital – PSD (mandatory, automatically created and without user costs, set to incentivize savings and digital operations, providing digital card instead of a physical one).

Clawback clause for unspent benefits – 90 days, further expanded to 120, and especially expanded to 270 for Bolsa Família beneficiaries, indigenous registered on Cadastro Único and residents of Acre and Amazonas.

[illegible]

Gradual approach to Bolsa Família beneficiaries, who were exempted from the interval between crediting the benefit (limited to digital operations) and the withdrawing rights, while also keeping its own calendar.

Physical cash distribution according to demand maps based on previous experience with Bolsa Família and Other programmes

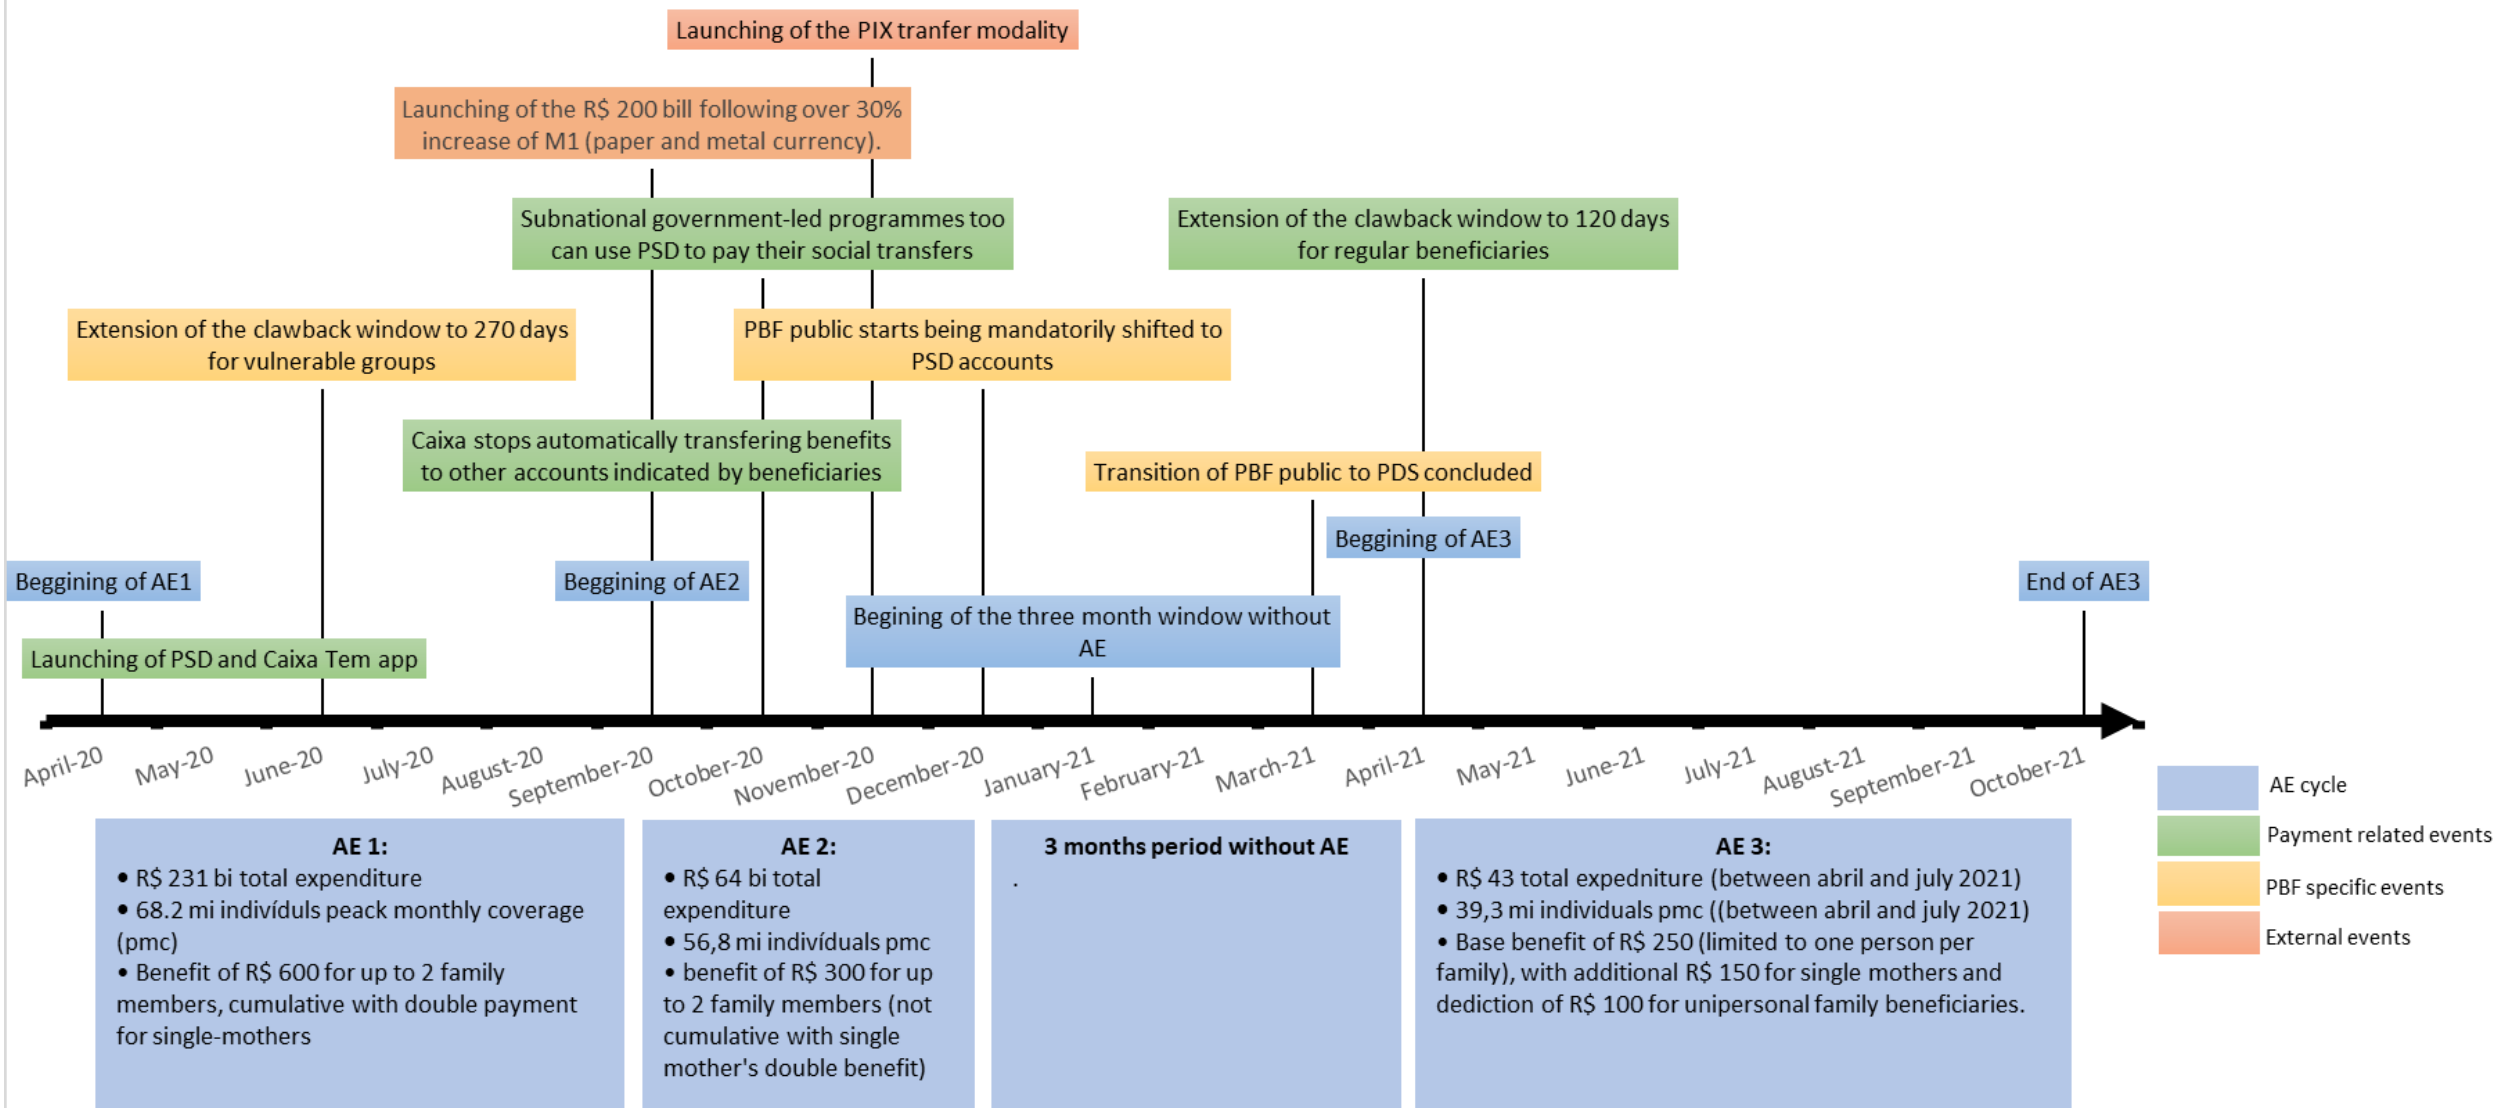

PIX has covered up for PSD liquidity challenges – introduced in November 2020, this free and instant transfer modality has popularized itself as a widely accepted payment mechanism.

PSD achieved over 100 million customers in 9 months, as it also became the payment account of Other social transfers

TIMELINE

PSD KEY OUTCOMES

High uptake of Virtual Card based operations up until the introduction of PIX (figures for all PSD clientes, not limited to AE beneficiaries)

a) Virtual Cards issued (million)

b) Number of transactions processed via Virtual Cards and, specifically, through its QR Code function (in million BRL)

c) Total transacted values via PSD accounts, and specifically through its QR Code function (in billion BRL)

d) Registered PIX keys (millions)

e) Total values transacted via PIX (in billion BRL)

f) Number of PIX transactions by Caixa clients (million)

PSD KEY OUTCOMES

Strongly correlated with historical high savings rates.

a) SAVINGS BOOK (SBPE + RURAL). NET CAPTURE - Annual Evolution

b) Savings Account (SBPE + RURAL) - Net Funding - Monthly evolution

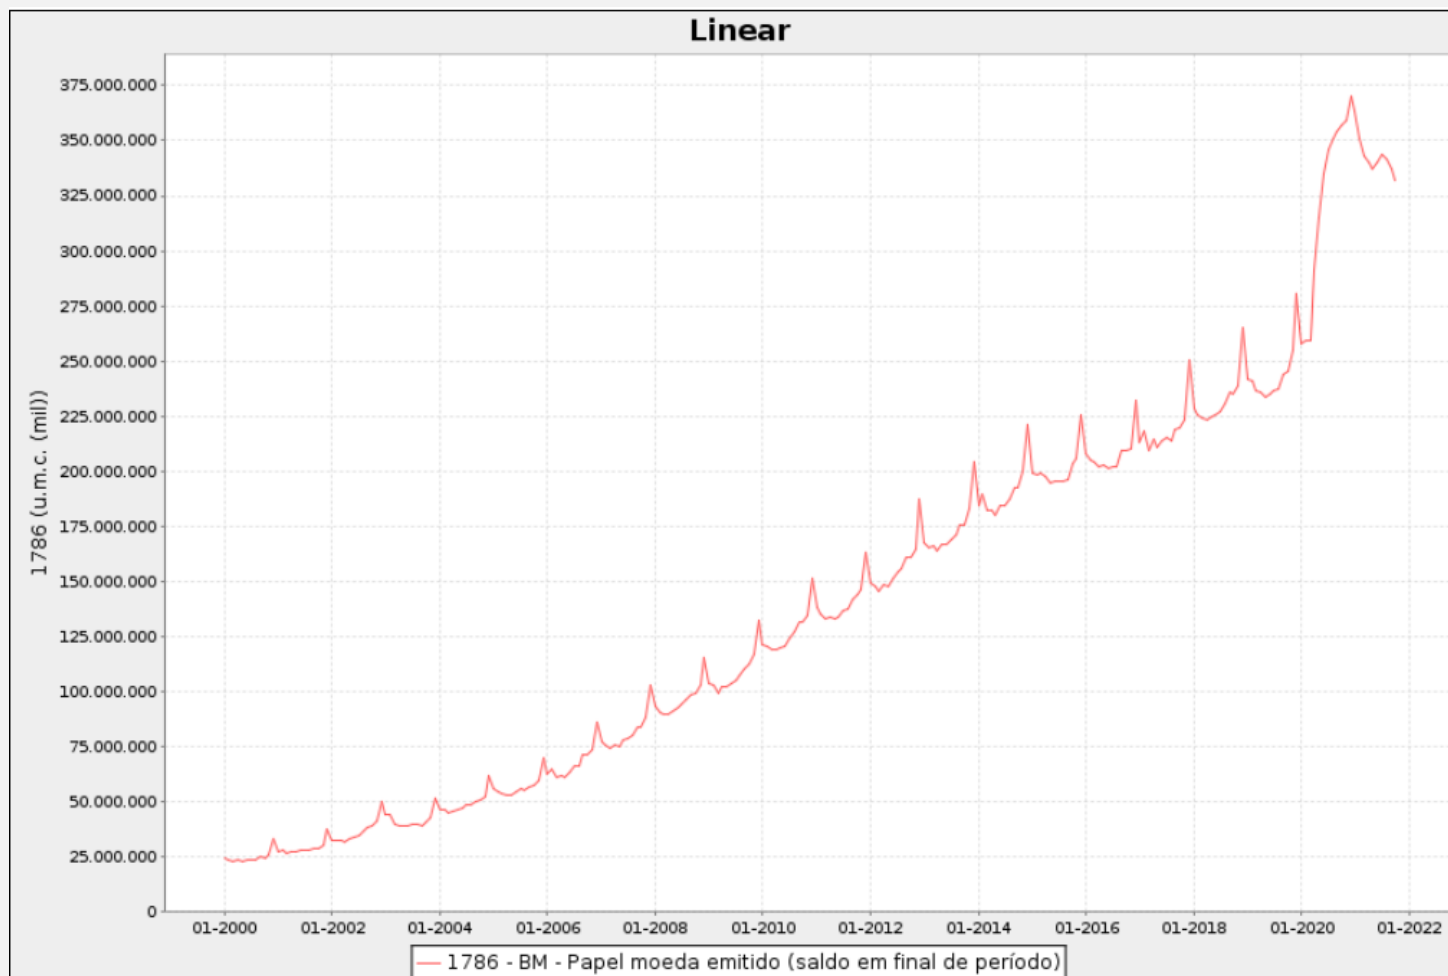

c) Federal Government spending to fight COVID-19, per area of action and social assistance actions, 2020 and 2021

PSD KEY OUTCOMES

- **Potentially high use of digital operations by AE beneficiaries** - Corresponding to 75% of all values paid by the programme
- **Important driver to the currency expansion**
 - 32% M1 growth in 2020
 - Launch of the new, BRL 200 bill

CONCEPTUAL FRAMEWORK

Modern G2P Architecture: Building Blocks

PILLARS

DESIGN PRINCIPLES

Multiple programs plug into shared infrastructure.

Shared infrastructure is interoperable and seamlessly supports various programs and financial service providers.

Availability of choice of payment service provider

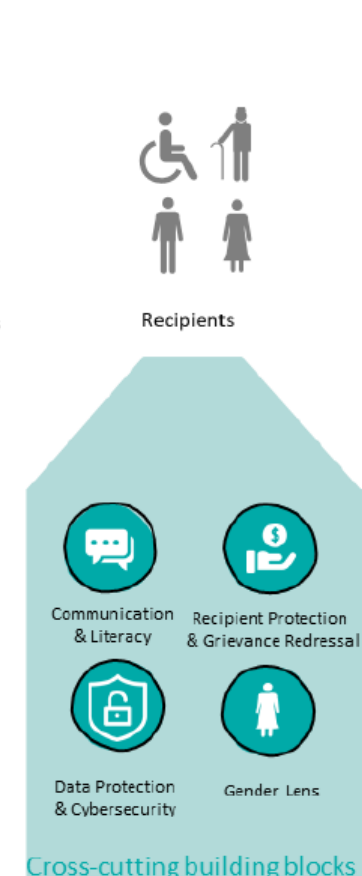

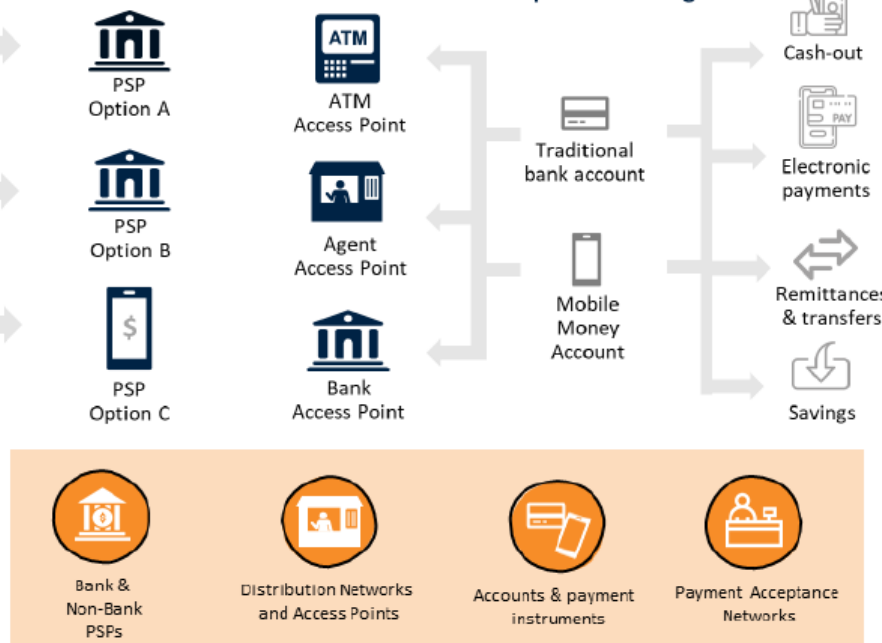

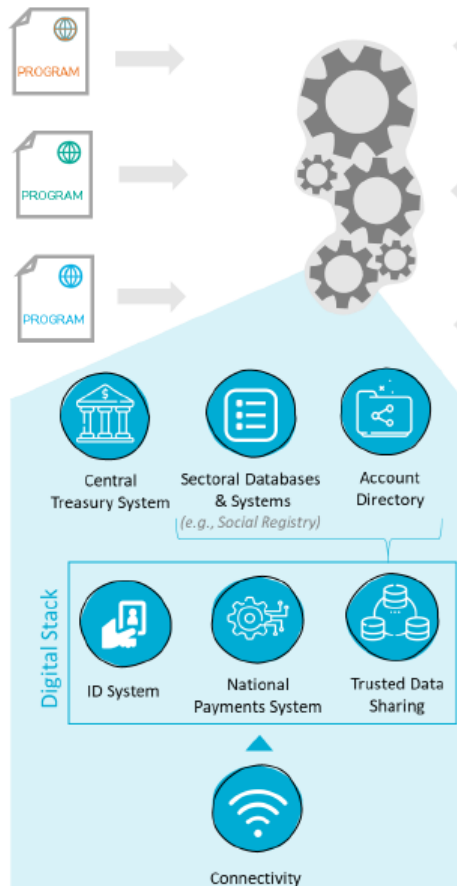

Access points are numerous and widely accessible

Received in a fully functional account that is adequate for recipients with **simple onboarding**

Enabling uses beyond cash-out

Designed for recipients with their needs, barriers and preferences in mind

BUILDING BLOCKS

INTEROPERABILITY AND SHARED STRUCTURES

Multiple programmes

ID System

- CPF-based **unique personal identification**.
- **Digital authentication** against Cadastro Único and ExtraCad co-managed by Caixa (back-end) and Ministério da Cidadania (back and front-end).

National payment systems

- **Standardization of processes** anchored on decades long of collaboration paying social transfers, also adherent to standards set by controlling organs
- **Pricing policies for off-use transactions are reasonable**: R\$ 1.35 to 2.46 per PBF payment (1,2% of payment value); R\$ 1.39 per AE payment (0.2% to 1% of payment value)

Trusted data sharing

- **Safeguarded** by LGPD

ENABLERS FOR ACCESSIBLE AND CHOICE BASED G2P PAYMENTS

Payment Service Provider

- **No choice for beneficiaries** with Caixa exerting near-monopoly... with facilitated inter-bank transfer
- **Yet Caixa practices very low prices**, also made possible due to its strong position on low-income housing credit benefitting from FGTS funds
- **A compensation structure that is guaranteed for a sufficient period**, as most benefits are offered on a continuous and fairly predictable fashion.

Distribution networks and access points

- **Physical proximity and accessibility of points of service to where recipients live**, expressed by its coverage 99% of Brazil's 5,570 municipalities + itinerant agencies
- **Liquidity** strengthened by previous records of most demanded points of withdraw and strategical currency distribution plans.

Accounts and payment instruments

- **Account opening process**
- **Fully functional account that allows beneficiaries to transact and save**
- **No fees**, at least up to a certain threshold of transacted values per month
- **Clawback clauses go against incentives to savings and investments**

Payment Acceptance Networks

- Cardless PSD account with **virtual debit cards** (accepted by 10% of POS), and national advantage of the PIX transfer modality.
- **Incentivizing the acceptance of electronic payments for transactions routinely performed by beneficiaries** through intervals crediting the benefit (limited to digital operations) and the right to withdraw in cash

INCLUSION AND EMPOWERMENT ACCELERATORS

Communication Strategy and Financial Literacy

- **Communication awareness and strategy supporting delivery**, mostly to explain the calendar rule
- **Variety of communication channels**, including 6+2 SAC channels, intense use of social media and bilateral partnerships with subnational governments for local campaigns

Recipient protection, M&G Redressal

- **Recourse mechanisms** availed as part of the SAC channels
- **Coordinated response** involving MC, Dataprev, Caixa and even SUAS
- **Payment reconciliation information provided to programme administrators** for each payment lot
- **Clawback cluses might add insecurity to beneficiaries**

- **Directing payments to women** as an outcome of AE's selection rule and benefit formulae (55% female beneficiaries)

CONCLUDING REMARKS

- **The use of PSD by AE and other programmes is probably one of the largest and fastest bancarization processes of the history.**
- **AE's payment operation will be the new pattern for social transfers in Brazil.**
- **Mandatory bancarization might not work on all juridical contexts, and once AE is over Caixa should make and effort to keep clientes active by offering them adequate financial instruments (low-cost insurances, special credit etc).**
- **PIX is a pathbreaking solution for liquidity related challenges, at least in contexts of wide access to internet.**
- **AE's clawback rules might go Against its savings incentives**
