

Estonia

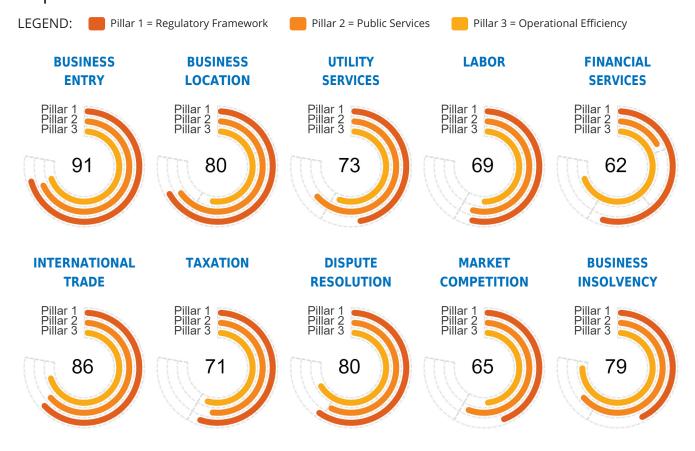

REGIONHigh income: OECD

INCOME GROUP High income

- Estonia scores highest in Business Entry, International Trade, and Business Location. Within these areas, the economy implemented good practices on company information filing requirements, a Trusted Trader Program with advanced features for exporters and importers, and building energy codes with robust energy-efficiency performance standards to be verified during the building process.
- Estonia scores lowest in Financial Services, Market Competition, and Labor. Within these areas, a unified collateral registry is not implemented, most of the measured features regarding the framework of state-owned enterprises and scope of competition law are not in place, and the economy does not fully adhere to best practices in setting the minimum wage.

Topic Scores

Business Entry

The Business Entry topic measures the process of registration and start of operations of new limited liability companies (LLCs) across three different dimensions, here referred to as pillars. The first pillar assesses the quality of regulations for business entry, covering de jure features of a regulatory framework that are necessary for the adoption of good practices for business start—ups. The second pillar measures the availability of digital public services and transparency of information for business entry. The third pillar measures the time and cost required to register new domestic and foreign firms.

Each pillar is divided into categories—defined by common features that inform the grouping into a particular category—and each category is further divided into subcategories. Each subcategory has several indicators, each of which may, in turn, have several components. Relevant points are assigned to each indicator and subsequently aggregated to obtain the number of points for each subcategory, category, and pillar.

Detailed methodology is available in the Methodology Handbook.

Business Location

The Business Location topic measures three different options purchasing, leasing, and building that are available to entrepreneurs to choose the adequate location to set up their company, across three different dimensions, here referred to as pillars. The first pillar assesses the quality of regulations pertaining to property transfer, building, and environmental permitting, covering de jure features of a regulatory framework that are necessary for immovable property lease, property ownership, urban planning, and environmental licenses. The second pillar assesses the quality of public services and transparency of information in the provision of property transfer, building, and environmental permitting. The third pillar measures the operational efficiency of establishing a business location in practice. The interaction between these three pillars ensures a comprehensive evaluation of business location, balancing regulatory quality, service transparency, and operational efficiency to create an optimal environment for business establishment. The three pillars consider both the firm's flexibility and the broader social benefits. They ensure a more balanced approach accounting for private sector needs while safeguarding public interests, such as environmental sustainability and public safety.

Each pillar is divided into categories—defined by common features that inform the grouping into a particular category—and each category is further divided into subcategories. Each subcategory has several indicators, each of which may, in turn, have several components. Relevant points are assigned to each indicator and subsequently aggregated to obtain the number of points for each subcategory, category, and pillar.

Detailed methodology is available in the Methodology Handbook.

Utility Services

The Utility Services topic measures the effectiveness of regulatory frameworks, and the quality of governance and transparency of service delivery mechanisms, as well as the operational efficiency of providing electricity, water, and internet services. Under the first pillar the Utility Services topic assesses the effectiveness of regulation pertaining to electricity, water, and internet services, covering de jure features of a regulatory framework that are necessary for the efficient deployment of connections, reliable service, safety, and environmental sustainability of provision and use of utility services. The second pillar of the topic measures the quality of governance and transparency in the provision of utility services, thus assessing the de facto provision of utility services. The third pillar measures the time required to obtain electricity, water, and internet connections, as well as the reliability of utility service supply.

Each pillar is divided into categories—defined by common features that inform the grouping into a particular category—and each category is further divided into subcategories. Each subcategory has several indicators, each of which may, in turn, have several components. Relevant points are assigned to each indicator and subsequently aggregated to obtain the number of points for each subcategory, category, and pillar.

Detailed methodology is available in the Methodology Handbook.

Labor

The Labor topic measures good practices in employment regulations and public services from the perspective of both enterprises and employees across three different dimensions, here referred to as pillars. The first pillar assesses the quality of labor regulations pertaining to workers' conditions and employment restrictions and costs, covering de jure features of the regulatory framework that are necessary for the functioning of the labor market and to provide employers and employees with their obligations and relevant safeguards. The second pillar measures the adequacy of public services for labor, assessing the de facto provision of social protection and the institutional framework on which the labor market and the enforcement of labor regulations depend. The third pillar measures the operational efficiency of labor regulations and public services in practice, assessing employment restrictions and cost, as well as public services.

Each pillar is divided into categories—defined by common features that inform the grouping into a particular category—and each category is further divided into subcategories. Each subcategory has several indicators, each of which may, in turn, have several components. Relevant points are assigned to each indicator and subsequently aggregated to obtain the number of points for each subcategory, category, and pillar.

Detailed methodology is available in the Methodology Handbook.

Financial Services

The Financial Services topic measures four areas— Commercial Lending; Secured Transactions; e—Payments; Credit Information—across three different dimensions, here referred to as pillars. The first pillar assesses the effectiveness of regulation pertaining to commercial lending, secured transactions, and epayments, covering the de jure features of regulatory frameworks. The second pillar measures the accessibility of information in credit infrastructure by evaluating the operation of credit bureaus and registries and the operation of collateral registries. Thus, the second pillar assesses de facto and some de jure aspects of financial services. The third pillar measures the operational efficiency of (i) obtaining a loan; (ii) registering a security interest as well as the timeliness of credit information sharing; and (iii) e—payments usage and their efficiency.

Each pillar is divided into categories—defined by common features that inform the grouping into a particular category—and each category is further divided into subcategories. Each subcategory has several indicators, each of which may, in turn, have several components. Relevant points are assigned to each indicator and subsequently aggregated to obtain the number of points for each subcategory, category, and pillar.

Detailed methodology is available in the Methodology Handbook.

International Trade

The International Trade topic measures different aspects of international trade—trade in goods, trade in services, and digital trade—across three different dimensions, here referred to as pillars. The first pillar assesses the quality of regulations pertaining to international trade, covering de jure features of a regulatory framework that are necessary to establish a nondiscriminatory, transparent, predictable, and safe environment to harness the potential of international trade. The second pillar assesses digital infrastructure and physical concerning international trade and the quality management, thus assessing de facto provision of public services for international trade facilitation. The third pillar measures the time and cost to comply with export and import requirements, participation in cross—border digital trade, as well as the perceived major obstacles for international trade.

Each pillar is divided into categories—defined by common features that inform the grouping into a particular category—and each category is further divided into subcategories. Each subcategory has several indicators, each of which may, in turn, have several components. Relevant points are assigned to each indicator and subsequently aggregated to obtain the number of points for each subcategory, category, and pillar.

Detailed methodology is available in the Methodology Handbook.

Taxation

The Taxation topic measures the quality of regulation, administration, and practical implementation of tax systems across the three different dimensions, referred to as pillars. The first pillar assesses the quality of regulation related to taxation, encompassing both the legal framework (de jure) and the implementation (de facto) of the legal requirements. The second pillar measures the quality of tax administration by assessing the public services related to tax matters. The third pillar evaluates the practical effectiveness of the implemented tax regulations and public services.

Each pillar is divided into categories—defined by common features that inform the grouping into a particular category—and each category is further divided into subcategories. Each subcategory has several indicators, each of which may, in turn, have several components. Relevant points are assigned to each indicator and subsequently aggregated to obtain the number of points for each subcategory, category, and pillar.

Detailed methodology is available in the Methodology Handbook.

Dispute Resolution

The Dispute Resolution topic measures efficiency and quality of the resolution of commercial disputes—those arising in the business context between firms—across three different dimensions, referred to as pillars. The first pillar assesses the adequacy of legislation pertaining to both court processes and alternative dispute resolution (ADR), covering de jure features that are necessary for the efficient processing of cases, facilitated resolution of cross —border claims, creating alternative venues for settling disputes, and ensuring trust in relevant institutions. The second pillar focuses on judicial organizational structure, courts' digitization and transparency, as well as ADRrelated services, thus capturing the de facto provision of public services. The third pillar measures the reliability of dispute resolution, the time and cost required to resolve a dispute, as well as the time and cost associated with the recognition and enforcement of decisions.

Each pillar is divided into categories—defined by common features that inform the grouping into a particular category—and each category is further divided into subcategories. Each subcategory has several indicators, each of which may, in turn, have several components. Relevant points are assigned to each indicator and subsequently aggregated to obtain the number of points for each subcategory, category, and pillar.

Detailed methodology is available in the Methodology Handbook.

Market Competition

The Market Competition topic measures good practices related to the enforcement of competition policy, intellectual property rights and innovation policy, and regulations that focus on improving competition and innovation in markets where the government is a purchaser of services or goods across the three different pillars. The first pillar assesses the quality of regulations that promote market competition, covering de jure features of a regulatory framework that enable firms to participate in fair market conditions and innovate, and where firms can participate in open and competitive government markets. The second pillar measures the adequacy of public services that promote market competition, thus assessing the de facto provision of services that create an equal level playing field in markets, and that foster and promote innovation. The third pillar operational efficiency measures the implementation of key services promoting market competition (reflecting both the ease of compliance with the regulatory framework and the effective provision of public services directly relevant to firms that contribute in practice to the promotion of market competition).

Each pillar is divided into categories—defined by common features that inform the grouping into a particular category—and each category is further divided into subcategories. Each subcategory has several indicators, each of which may, in turn, have several components. Relevant points are assigned to each indicator and subsequently aggregated to obtain the number of points for each subcategory, category, and pillar.

Detailed methodology is available in the Methodology Handbook.

Business Insolvency

The Business Insolvency topic measures key features of insolvency systems on a regulatory level. It also assesses the institutional and operational infrastructure associated with insolvency proceedings (judicial services), as well as the operational efficiency of insolvency proceedings across three different dimensions, here referred to as pillars. The first pillar assesses the quality of regulation pertaining to judicial insolvency proceedings — liquidation and reorganization, covering de jure features of a regulatory framework that are necessary for structured debt resolution processes and effective creditor and debtor regimes. The second pillar measures the quality of institutional and operational infrastructure for judicial insolvency proceedings, thus assessing the de facto aspects of insolvency resolution mechanisms and the infrastructure required to implement the legal framework on insolvency. The third pillar measures the time and cost required to resolve in—court liquidation reorganization proceedings.

Each pillar is divided into categories—defined by common features that inform the grouping into a particular category—and each category is further divided into subcategories. Each subcategory has several indicators, each of which may, in turn, have several components. Relevant points are assigned to each indicator and subsequently aggregated to obtain the number of points for each subcategory, category, and pillar.

Detailed methodology is available in the Methodology Handbook.
